**Army Techniques Publication Atp 3-04.7 Army Aviation Maintenance September 2017** United States Government US Army 2017-10-03 Army Techniques Publication ATP 3-04.7 Army Aviation Maintenance SEPTEMBER 2017 ATP 3-04.7 shapes the way Army aviation maintenance is to be conducted.

Aviation maintenance is very complex and unlike any other type of combat service support (CSS) organization. Aviation maintainers must be able to support the aviation force as it is designed to fight, not as it is organized for command and control. To accomplish this, aviation units must be modular in design. For aviation maintenance applications, modularity is intended to facilitate, at the tactical level, the task organization of logistics to support a designated aviation task force and to effectively implement "fix forward" aviation maintenance doctrine. Aviation maintenance support has never been more critical than in today's operating environment, where personnel and aircraft remain in high demand due to high operational tempo (OPTEMPO). Today's technically complex aircraft demand equally experienced aircraft maintainers and maintenance managers. The ability of an aviation unit to perform its wartime mission is numerically represented by its aircraft operational readiness rates. Higher operational readiness rates are a direct result of effective maintenance and logistics management by all aviation maintenance commanders/leaders, officers, technicians, and noncommissioned officers in charge (NCOICs). Maintenance is critical for all aircraft weapon platforms, systems, subsystems, and aviation ground support equipment. The failure of an operating aircraft system or subsystem, resulting from improper maintenance procedures, can have catastrophic and deadly consequences to personnel and equipment. Aviation maintainers must adhere to the latest applicable aircraft technical manuals (TMs) and references when conducting maintenance on their assigned aircraft. Each aviation maintenance company (AMC) and aviation support company (ASC) now possesses the capability to conduct split-based operations within a single theater of operations. Each AMC is responsible for performing field maintenance on its assigned/attached aircraft. ASCs assigned to aviation support battalions (ASBs) provide field maintenance support by conducting intermediate aviation maintenance according to the maintenance allocation chart (MAC). Aviation maintenance is training. Commander and leader must balance mission requirements while continuously assessing a unit's maintenance posture. The critical link between maintenance and readiness cannot be emphasized enough. This ATP ties regulatory guidance to practice, and serves as the primary reference for effectively managing aviation maintenance.

**Introduction to Power Utility Communications** Harvey Lehpamer 2016-04-30 This timely new book is a cutting edge resource for engineers involved in the electric utility industry. This one-of-a-kind resource explores the planning, design, and deployment of communications networks, including fiber, microwave, RF, and Ethernet in electric utility spaces as related to Smart Grid. Readers are presented with an introduction to power utility communications, providing a thorough overview of data transmission media, electrical grid, and power grid modernization. Communication fundamentals and fiber-optic radio system design are also covered. Network performance and reliability considerations are discussed including channel protection, system latency, and cyber and grid security. Clear examples and calculations are presented to demonstrate reliability and availability measures for fiber-optic systems.

**Army Techniques Publication Atp 3-34.40 McWp 3-17.7 General Engineering February 2015**

United States Government US Army 2015-05-06 Army Techniques Publication ATP 3-34.40 MCWP 3-17.7 General Engineering provides doctrine for the conduct of GE support by the U.S. Army and U.S. Marine Corps. It emphasizes the GE unity of effort by providing a common philosophy, language, and purpose. GE is a joint function and a U.S. Army discipline. This manual discusses how GE enables commanders to achieve their objectives in supporting joint and U.S. Army operations. This publication also introduces subordinate doctrine. This publication describes how engineer commanders, staffs, and subordinate leaders conduct GE to support Army and Marine forces within the framework of joint operations. Additional considerations for engineer operations in coalition operations are reviewed in Allied Joint Publication 3-12 Allied Joint Doctrine for Joint Engineering and Allied Tactical Publication -52 Edition B, Land Force Combat Engineer Doctrine. Chapter 1 discusses GE as a joint and U.S. Marine Corps engineer function and a U.S. Army engineer discipline. It introduces the new GE life cycle activities of planning, design, construction, operation, maintenance, transfer, and closure that are used to frame the discussion in other chapters. It then discusses employment considerations for GE. Chapter 2 describes GE support across the range of military operations at theater, operational, and tactical levels. Chapter 3 provides an overview of GE planning and design that is discussed in detail within other chapters. Chapter 4 discusses construction and introduces multi-Service doctrine on project management and estimating. This chapter discusses methods of construction and construction material procurement and production. It adds the framework of construction techniques that are discussed in numerous subordinate technical manuals. Chapter 5 provides an overview of seaports. Seaports could be used for deployment and redeployment as a seaport of debarkation or as a seaport of embarkation. It includes a discussion on planning and design, construction, operation, maintenance, and logistics over-the-shore (LOTS) support. Chapter 6 provides an overview of airfields and heliports aligned with revised subordinate doctrine to include planning and design, construction, operation, and maintenance. Chapter 7 provides an overview of roads and railroads aligned with revised subordinate doctrine to include planning and design, construction, operation, and maintenance. Chapter 8 discusses an overview of bridging to include bridge types, planning and design, construction, operation, and maintenance. Chapter 9 merges discussion of base camps and bed-down facilities that includes support area facilities. It discusses a GE overview of base camps. It also includes base camp responsibilities, Service capabilities, planning and design, standards, site layout, and construction. Chapter 10 discusses real estate and provides an overview of real property maintenance that is covered in detail within the other chapters of this manual. It deletes the use of the term real property maintenance activities and only discusses real property maintenance. Chapter 11 discusses electrical power systems and design considerations for reliability, efficiency, and scalability. It also discusses the emerging requirements to store electricity and incorporate renewable sources of energy. It provides an overview of Service capabilities and electrical safety requirements. Chapter 12 discusses GE support to the sustainment/combat service support water functions of production and distribution. The chapter discusses well drilling and includes water production and distribution responsibilities, planning and design, Service capabilities, employment, and operations. It expands discussion on water distribution within facilities as a plumbing task. The GE doctrine provided in this manual presents an overview of a wide range of topics and

allows the reader to understand how the topics fit together.

*DESIGNING FUTURE STABILIZATION EFFORTS* Stephan De Spiegeire As the NATO combat mission in Afghanistan draws to an end, the 'West' is starting to take a hard look back at two decades of global stabilization efforts. The 'lessons learned' literature on these efforts is exploding. One of the dominant themes in this literature is the need to embed the specifically military toolkit into a much more comprehensive, integrated approach towards planning and executing. In this forward-looking report, HCSS goes a step further by focusing not on the operational but on the strategic level of decision-making. Today, this strategic layer is driven much more by domestic and international 'politicking' than by creative strategic thinking. This report advocates a new approach to strategic decision-making which we label 'strategic design'. It summarizes and borrows some key insights from the 'design thinking' literature in the business and public management literature and applies those to the security challenges surrounding stabilization efforts. The report then illustrates this approach by developing and evaluating a few 'design sketches' for new capability elements that even a small force provider like The Netherlands could start developing. The report might be of interest to strategic planners and decision-makers on both the military and civilians side
