Hypertext semiotics in the commercialized Internet

Moritz Neumüller 2003-04-15
Inhaltsangabe:Abstract:
Building on approaches that have succeeded in applying semiotic principles and methodology to computer science, such as computer semiotics, computational semiotics, and semiotic interface engineering, this dissertation establishes a systematic account for those researchers who are ready to look at hypertext from a semiotic point of view. Rather than a new hypertext model, this work presents the prolegomena of a theory of hypertext semiotics, interlacing the existing models with the findings of semiotic research, on all levels of the textual, aural, visual, tactile and olfactory channels. A short history of hypertext, from its

prehistory to today's state of the art systems and the current developments in the commercialized World Wide Web creates the context for this approach which should be seen as a fortification of the connection between the media semiotic approach and computer semiotics. While computer semioticians claim that the computer is a semiotic machine and Artificial Intelligence scientists underline the importance of semiotics for the construction of the next hypertext generation, this paper makes use of a much broader methodological basis. These findings are placed in the context of the commercialization of the Internet. Besides identifying the main challenges for eCommerce from the viewpoint of hypertext semiotics, the author concentrates on information goods and the current limitations for a new economy, such as restrictive intellectual property and copyright laws. A semiotic analysis of iMarketing

techniques and the Toywar complete the dissertation. Zusammenfassung: Diese Dissertation legt einen systematischen Ansatz für all jene Forscher dar, die bereit sind, Hypertext aus einer semiotischen Perspektive zu betrachten. Durch die Verknüpfung existierender Hypertext-Modelle mit den Resultaten aus der Semiotik auf allen Sinnesebenen der textuellen, auditiven, visuellen, taktilen und geruchlichen Wahrnehmung skizziert der Autor Prolegomena einer Hypertext-Semiotik-Theorie, anstatt ein völlig neues Hypertext-Modell zu präsentieren. Eine Einführung in die Geschichte der Hypertexte, von ihrer Vorgeschichte bis zum heutigen Entwicklungsstand und den gegenwärtigen Entwicklungen im kommerzialisierten World Wide Web bilden den Rahmen für diesen Ansatz, welcher als Fundierung des Brückenschlages zwischen Mediensemiotik und Computer-Semiotik angesehen werden

darf. Während Computer-Semiotiker wissen, dass der Computer [...]

Plant Breeder's Rights Act 1994 (Australia) (2018 Edition)

The Law The Law Library 2018-06 Plant Breeder's Rights Act 1994 (Australia) (2018 Edition) The Law Library presents the complete text of the Plant Breeder's Rights Act 1994 (Australia) (2018 Edition). Updated as of May 15, 2018 This book contains: - The complete text of the Plant Breeder's Rights Act 1994 (Australia) (2018 Edition) - A table of contents with the page number of each section *ACM Transactions on Information Systems* 1989 *Database and Expert Systems Applications* A Min Tjoa 2012-12-06 Use and development of database and expert systems can be found in all fields of computer science. The aim of this book is to present a large spectrum of already implemented or just being developed database and expert systems. Contributions cover new requirements,

concepts for implementations (e.g. languages, models, storage structures), management of meta data, system architectures, and experiences gained by using traditional databases in as many areas of applications as possible (at least in the fields listed). The aim of the book is to inspire a fruitful dialogue between development in practice, users of database and expert systems, and scientists working in the field.

Decision Making in Spinal Care

David Greg Anderson

2011-01-01 Decision Making in Spinal Care presents all the current information on management strategies for the most common spine problems, including trauma injuries, metabolic and degenerative diseases, and spinal deformities. Each chapter opens with a concise introduction to the topic and discussion of the classification of the injury, condition, or management approach. The authors then describe the diagnostic workup of the patient, the treatment options

available, the likely outcome, and possible complications. Highlights: Treatment algorithms at the start of each chapter enable clinicians to rapidly determine the pathology of a spine condition, formulate a diagnostic plan, and choose which surgical or nonsurgical treatment is best. Discussion of contemporary spinal issues, including spinal tumors, osteoporosis, minimally invasive surgery, and nonfusion techniques, keeps the clinician abreast of the latest advances. Annotated lists of key references, complete with synopses of the articles and chapters referenced, enable readers to pursue topics at greater length. More than 200 figures demonstrate important concepts. This must-have reference is ideal for orthopedic surgeons, neurosurgeons, physiatrists, and primary care physicians seeking to sharpen their clinical decision-making skills in managing spine conditions. The book will also benefit spine fellows, medical students, and residents needing a

comprehensive board review. Introduction to Modern Information Retrieval Gerard Salton 1983 Examines Concepts, Functions & Processes of Information Retrieval Systems *Conversations with Kazuo Ishiguro* Kazuo Ishiguro 2008 Nineteen interviews conducted over the past two decades on both sides of the Atlantic and beyond with the author of the Booker Prize-winning *The Remains of the Day* *Document Computing* Ross Wilkinson 2012-12-06 *Document Computing: Technologies for Managing Electronic Document Collections* discusses the important aspects of document computing and recommends technologies and techniques for document management, with an emphasis on the processes that are appropriate when computers are used to create, access, and publish documents. This book includes descriptions of the nature of documents, their components and structure, and how they can be represented; examines

how documents are used and controlled; explores the issues and factors affecting design and implementation of a document management strategy; and gives a detailed case study. The analysis and recommendations are grounded in the findings of the latest research. *Document Computing: Technologies for Managing Electronic Document Collections* brings together concepts, research, and practice from diverse areas including document computing, information retrieval, librarianship, records management, and business process re-engineering. It will be of value to anyone working in these areas, whether as a researcher, a developer, or a user. *Document Computing: Technologies for Managing Electronic Document Collections* can be used for graduate classes in document computing and related fields, by developers and integrators of document management systems and document management applications, and by anyone wishing to

understand the processes of document management.

Casa Marcela Marcela Valladolid 2017-04-25 California-Mexican-style recipes and menus from the beloved Food Network host From the long-time host of Food Network's Mexican Made Easy and now co-host of The Kitchen comes Marcela's most personal collection of recipes yet, a reflection of her experience growing up in Tijuana and traveling back and forth to San Diego to see family and friends and for school. This book captures a culture centered around food, loved ones, and gatherings with mouthwatering recipes and in vibrant photography, all shot at Valladolid's home. Mexican food really is simple at its core, if you have some extra time for slow roasting meats or to prepare a few salsas, and the results are sure to impress. There are small bites like Cod Fritters with Chipotle Tartar Sauce and Grilled Steak and Cheese Tostadas; entrees such as Red Chile Lamb Stew and Roasted Tomatillo Salmon; and

even drinks and desserts for special occasions, including Strawberry Layered Tres Leches Cake. With mouthwatering recipes and evocative photography, Casa Marcela presents Mexican food in a way never seen before.

Adaptive Hypertext and Hypermedia Peter Brusilovsky 2013-04-17

Hypertext/hypermedia systems and user-model-based adaptive systems in the areas of learning and information retrieval have for a long time been considered as two mutually exclusive approaches to information access. Adaptive systems tailor information to the user and may guide the user in the information space to present the most relevant material, taking into account a model of the user's goals, interests and preferences. Hypermedia systems, on the other hand, are 'user neutral': they provide the user with the tools and the freedom to explore an information space by browsing through a complex network of information nodes. Adaptive hypertext and

hypermedia systems attempt to bridge the gap between these two approaches. Adaptation of hypermedia systems to each individual user is increasingly needed. With the growing size, complexity and heterogeneity of current hypermedia systems, such as the World Wide Web, it becomes virtually impossible to impose guidelines on authors concerning the overall organization of hypermedia information. The networks therefore become so complex and unstructured that the existing navigational tools are no longer powerful enough to provide orientation on where to search for the needed information. It is also not possible to identify appropriate pre-defined paths or subnets for users with certain goals and knowledge backgrounds since the user community of hypermedia systems is usually quite inhomogeneous. This is particularly true for Web-based applications which are expected to be used by a much greater variety of users than any earlier standalone application. A possible remedy

for the negative effects of the traditional 'one-size-fits-all' approach in the development of hypermedia systems is to equip them with the ability to adapt to the needs of their individual users. A possible way of achieving adaptivity is by modeling the users and tailoring the system's interactions to their goals, tasks and interests. In this sense, the notion of adaptive hypertext/hypermedia comes naturally to denote a hypertext or hypermedia system which reflects some features of the user and/or characteristics of his system usage in a user model, and utilizes this model in order to adapt various behavioral aspects of the system to the user. This book is the first comprehensive publication on adaptive hypertext and hypermedia. It is oriented towards researchers and practitioners in the fields of hypertext and hypermedia, information systems, and personalized systems. It is also an important resource for the numerous developers of Web-based applications. The design

decisions, adaptation methods, and experience presented in this book are a unique source of ideas and techniques for developing more usable and more intelligent Web-based systems suitable for a great variety of users. The practitioners will find it important that many of the adaptation techniques presented in this book have proved to be efficient and are ready to be used in various applications.

New Trends in Animation and Visualization Nadia Magnenat-Thalmann 1991-09-05 This selection of works on advanced computer graphics techniques in animation and visualization contains contributions by leading international experts in the field from the U.S., Europe, and Japan presenting new and important topics from a practical and a theoretical viewpoint. It covers virtual environments, object-oriented programming in computer animation, shape interrogation, facial animation, animation in architecture, and human modeling in visualization.

Twelve Years A Slave, Illustrated Edition Solomon Northup 2014-04-08 Kidnapped and sold into slavery in the American South, freeman Solomon Northup spent twelve years in bondage before being freed. *Twelve Years a Slave* is Northup's moving memoir, revealing unimaginable details of the horrors he faced as a slave on Southern plantations, and his unshakable belief that he would return home to his family. Written in the year after Northup was freed and published in the wake of Harriet Beecher Stowe's *Uncle Tom's Cabin*, Northup's story was quickly taken up by abolitionist groups and news organizations as part of the fight against slavery, and continues to resonate more than a century after the end of the American Civil War.

Hypertext/hypermedia Handbook Emily Berk 1991 HyperText or HyperMedia is electronic documentation that does not proceed from start to finish in a linear fashion. This book is the first comprehensive handbook on the methods and

techniques of using a hypertext, with emphasis on designing and implementing hypertext projects.

Information Retrieval

Systems Gerald J. Kowalski
2007-08-23 The growth of the Internet and the availability of enormous volumes of data in digital form have necessitated intense interest in techniques to assist the user in locating data of interest. The Internet has over 350 million pages of data and is expected to reach over one billion pages by the year 2000. Buried on the Internet are both valuable nuggets to answer questions as well as a large quantity of information the average person does not care about. The Digital Library effort is also progressing, with the goal of migrating from the traditional book environment to a digital library environment. The challenge to both authors of new publications that will reside on this information domain and developers of systems to locate information is to provide the information and capabilities to sort out the non-

relevant items from those desired by the consumer. In effect, as we proceed down this path, it will be the computer that determines what we see versus the human being. The days of going to a library and browsing the new book shelf are being replaced by electronic searching the Internet or the library catalogs. Whatever the search engines return will constrain our knowledge of what information is available. An understanding of Information Retrieval Systems puts this new environment into perspective for both the creator of documents and the consumer trying to locate information.

Calculus Earl William Swokowski 1996-03-31 This is a simple, straightforward, direct calculus text. Historical strengths rest in the broad use of applications, the easy-to-understand writing style, and the wealth of examples and exercises to reinforce conceptualization of the subject matter. The inclusion of two (new) co-authors should pique interest in a book that in

its heyday was the #1 best-seller. With Olinick's handle on applications (he has written a successful modeling book) and Pence's keen sense of technology (he is a guru on the HP and TI graphing calculators), we feel we have put together an unparalleled team of experts.

Information Storage and Retrieval Systems Gerald J. Kowalski 2005-11-19 Chapter 1 places into perspective a total Information Storage and Retrieval System. This perspective introduces new challenges to the problems that need to be theoretically addressed and commercially implemented. Ten years ago commercial implementation of the algorithms being developed was not realistic, allowing theoreticians to limit their focus to very specific areas. Bounding a problem is still essential in deriving theoretical results. But the commercialization and insertion of this technology into systems like the Internet that are widely being used changes the way problems are bounded.

From a theoretical perspective, efficient scalability of algorithms to systems with gigabytes and terabytes of data, operating with minimal user search statement information, and making maximum use of all functional aspects of an information system need to be considered. The dissemination systems using persistent indexes or mail files to modify ranking algorithms and combining the search of structured information fields and free text into a consolidated weighted output are examples of potential new areas of investigation. The best way for the theoretician or the commercial developer to understand the importance of problems to be solved is to place them in the context of a total vision of a complete system. Understanding the differences between Digital Libraries and Information Retrieval Systems will add an additional dimension to the potential future development of systems. The collaborative aspects of digital libraries can

be viewed as a new source of information that dynamically could interact with information retrieval techniques.

Information Retrieval

Architecture and Algorithms

Gerald Kowalski 2010-12-01

This text presents a theoretical and practical examination of the latest developments in Information Retrieval and their application to existing systems. By starting with a functional discussion of what is needed for an information system, the reader can grasp the scope of information retrieval problems and discover the tools to resolve them. The book takes a system approach to explore every functional processing step in a system from ingest of an item to be indexed to displaying results, showing how implementation decisions add to the information retrieval goal, and thus providing the

user with the needed outcome, while minimizing their resources to obtain those results. The text stresses the current migration of information retrieval from just textual to multimedia, expounding upon multimedia search, retrieval and display, as well as classic and new textual techniques. It also introduces developments in hardware, and more importantly, search architectures, such as those introduced by Google, in order to approach scalability issues. About this textbook: A first course text for advanced level courses, providing a survey of information retrieval system theory and architecture, complete with challenging exercises Approaches information retrieval from a practical systems view in order for the reader to grasp both scope and solutions Features what is achievable using existing technologies and investigates what deficiencies warrant additional exploration **More Than Meat Joy** Carolee Schneemann 1979

Organizing Creativity Daniel Wessel 2010-01-30 This book was written as a help for individual persons who want to organize their creativity, be it for science (incl. engineering and commercial projects), art, or private projects. Its aim is to enlarge your options when having ideas and to improve the chance of realizing creative projects. It is written as a practical handbook and describes how organization can support generating, capturing, collecting (incl. enlarging, restructuring, etc.) and realizing ideas. While creativity "techniques" are dealt with, the focus is on the infrastructure to enable you to capture your fleeting ideas and cultivate them to finally realize them as creative projects.

Elements of Hypermedia Design: Techniques for Navigation & Visualization in Cyberspace

Peter Gloor 2013-11-11 The hypermedia authoring process has been vividly described in a special issue of the Economist as a combination of writing a book, a play, a film, and a radio or

television show: A hypermedia document combines all these elements and adds some of its own. The author's first job is to structure and explain all of the information. The author then must distill the information into brief, descriptive nodes. Each node has to contain a list of the ingredients, and instructions on how the ingredients are mixed together to the greatest advantage. The structure of the material provided is translated into an architectural metaphor of some kind; much of the designer's work is the creation of this imaginary space. Then, the designers must chart the details of what to animate, what to film, who to interview, and how to arrange the information in the space to be built [Eco95a]. This book presents guidelines, tools, and techniques for prospective authors such that they can design better hypermedia documents and applications. It surveys the different techniques used to organize, search, and structure information in a large information system. It then describes the

algorithms used to locate, reorganize, and link data to enable navigation and retrieval. It looks in detail at the creation and presentation of certain types of visual information, namely algorithm animations. It introduces new mechanisms for editing audio and video data streams.

Research and Advanced Technology for Digital Libraries José Luis Borbinha 2009-09-15 This book constitutes the refereed proceedings of the 13th European Conference on Research and Advanced Technology for Digital Libraries, ECDL 2009, held in Corfu, Greece, in September/October 2009. The 28 revised full papers and 6 revised short papers presented together with 2 panel description, the extended abstracts of 20 revised poster and 16 demo papers were carefully reviewed and selected from a total of 181 submissions. The papers are organized in topical sections on services, infrastructures, interaction, knowledge

organization systems, interfaces, resource discovery, architectures, information retrieval, preservation, and evaluation.

Health Care Comes Home
National Research Council
2011-06-22 In the United States, health care devices, technologies, and practices are rapidly moving into the home. The factors driving this migration include the costs of health care, the growing numbers of older adults, the increasing prevalence of chronic conditions and diseases and improved survival rates for people with those conditions and diseases, and a wide range of technological innovations. The health care that results varies considerably in its safety, effectiveness, and

efficiency, as well as in its quality and cost. Health Care Comes Home reviews the state of current knowledge and practice about many aspects of health care in residential settings and explores the short- and long-term effects of emerging trends and technologies. By evaluating existing systems, the book identifies design problems and imbalances between technological system demands and the capabilities of users. Health Care Comes Home recommends critical steps to improve health care in the home. The book's recommendations cover the regulation of health care technologies, proper training and preparation for people who provide in-home care, and how existing housing can be modified and new accessible housing can be better designed for residential health care. The book also identifies knowledge gaps in the field and how these can be addressed through research and development initiatives. Health Care Comes Home lays the foundation for

the integration of human health factors with the design and implementation of home health care devices, technologies, and practices. The book describes ways in which the Agency for Healthcare Research and Quality (AHRQ), the U.S. Food and Drug Administration (FDA), and federal housing agencies can collaborate to improve the quality of health care at home. It is also a valuable resource for residential health care providers and caregivers.

Hypertext Roy Rada 1991 Shows hypertext as a combination of dimensions that extend across large document collections, collaborative work, and artificial intelligence. Describes how the combination of expert systems and hypertext systems increases the utility of each system. Extensive, well-indexed margin notes make concepts and ideas easy to find and study. No background in computers is required, and anyone interested in combining text and high technology will

Sensing Sound Nina Sun Eidsheim 2015-12-11 In *Sensing Sound* Nina Sun Eidsheim offers a vibrational theory of music that radically re-envision how we think about sound, music, and listening. Eidsheim shows how sound, music, and listening are dynamic and contextually dependent, rather than being fixed, knowable, and constant. She uses twenty-first-century operas by Juliana Snapper, Meredith Monk, Christopher Cerrone, and Alba Triana as case studies to challenge common assumptions about sound—such as air being the default medium through which it travels—and to demonstrate the importance a performance's location and reception play in its contingency. By theorizing the voice as an object of knowledge and rejecting the notion of an a priori definition of sound, Eidsheim releases the voice from a constraining set of fixed concepts and meanings. In

Eidsheim's theory, music consists of aural, tactile, spatial, physical, material, and vibrational sensations. This expanded definition of music as manifested through material and personal relations suggests that we are all connected to each other in and through sound. *Sensing Sound* will appeal to readers interested in sound studies, new musicology, contemporary opera, and performance studies.

Ophthalmology in Military and Civilian Casualty Care

Christopher J. Calvano
2019-07-30 Trauma to the eye and associated structures account for a significant number of combat-related injuries, and combat ocular trauma has steadily risen in frequency over the last century. *Ophthalmology in Military and Civilian Casualty Care* comprehensively examines the accommodations and modifications that must be made in order to treat such ocular traumas in a military setting. Created by ophthalmology experts actively serving in the military at

various levels, this book is designed to improve ophthalmic casualty outcomes across military settings. A history of military ophthalmology serves as the opening chapter, setting the stage for subsequent chapters examining the intricacies and advancements of damage control ophthalmology, prehospital care of combat eye injuries, neuro-ophthalmic manifestations of trauma, and further severe ocular conditions. Later chapters explore the preventative and proactive efforts to reduce and treat combat-related ocular trauma by developing "eye armor" for the American infantry and military-affiliated ophthalmic surgical missions. Complete with high-quality color illustrations and figures, this unique book will serve as an invaluable, practical reference for military physicians, military ophthalmologists, ophthalmology professors, residents, and fellows interested in combat medicine and eye trauma.

Animated Algorithms Peter Gloor 1993 This hypermedia CD-ROM provides an ideal format for the visual explanation of complex algorithms contained in the text *Introduction to Algorithms*, by Thomas H. Cormen, Charles E. Leiserson, and Ronald L. Rivest. It contains three complementary components: a hypertext version of the book itself, interactive animations of the most important algorithms, and movies explaining the use of the hypertext interface and the animations. The hypertext, including the figures, is stored in HyperCard stacks. It contains tools for navigation, text annotation, tracking of preexisting links, full-text search, and the adding of links and paths through the document. This enables instructors and students to customize the hypertext easily for classroom and personal use. The animations that are implemented in HyperCard are linked with the hypertext and can be controlled interactively

by the user. They also include extensive on-line help, making them self-contained. Some animations include scripting facilities allowing users to program animations of specific data structures. The movies ("talking heads" and demonstrations) provide a way to view noninteractive versions of the algorithm animations. These are stored on the CD in QuickTime format. Peter Gloor is Research Associate in the Laboratory for Computer Science, and Scott Dynes is a Ph.D candidate in the Eaton Peabody Laboratory, both at the Massachusetts Institute of Technology. Irene Lee was formerly a graduate student at Harvard University. *Animated algorithms: Asymptotic Notation. Recursion. Simple Data Structures. Sorting Algorithms and Analysis. Hashing. Binary Trees. Keys for Writers Ann Raimes
 1999 This concise composition
 handbook offers innovative
 design features that make it
 the most accessible tabbed
 handbook available: moveable
 KeyTabs that allow students to
 personalize the book, a menu-
 driven Key to the Book, and
 color-coded divider tabs to help
 students find information
 quickly. Complete coverage of
 grammar and the writing,
 research, and documentation
 processes are complemented
 by helpful multilingual/ESL
 material, Writing Across the
 Curriculum elements, and The
 5Cs of Style. In recent years,
 technology has touched every
 aspect of writing and research
 and the Third Edition of Keys
 for Writers keeps pace with
 students' changing needs. This
 thorough revision now offers a

full-color design; substantial new material on evaluating sources and the use of technology for research and writing; expanded coverage of writing online and document design; the most up-to-date MLA, APA, CMS, CBE, and CGOS guidelines; integrated ESL resources; and an expanded section on argument. New! A new Part 5, Technology: For Communication, Document Design, and Work, presents the latest information on writing for online readers, e-mail discussion lists, and chatrooms. Ample illustrations--including a sample student web site and an online scannable resume--and easy-to-understand explanations address web site and document design as well as work-related documents. New! The new full-color design highlights important information and clearly depicts web graphics, charts, and other visuals. New! Completely up-to-date documentation coverage features the latest MLA and APA styles, as updated on their respective web sites, the

Columbia Guide to Online Style, many new student examples, and a new student paper. Two rows of color-coded divider tabs aid students in finding information quickly. Red tabs (Parts 1-5) cover whole paper issues: the writing process, research and documentation, online and business writing, and document design. Gold tabs (Parts 6-10) cover sentence-level issues such as usage, grammar, punctuation, and mechanics. Color-coded Key to the Book, an initial menu page, aligns the table of contents with the divider tabs to help students flip directly to the part they need. Its colors correspond to those of the divider tabs. Unique moveable KeyTabs serve as bookmarks, extended margins, or note cards, and enable students to customize the book for quick access to the information they decide they need most. Key Points boxes present concise summaries and checklists to highlight vital information and encourage the development of editing and critical-thinking

skills. New! Updated and expanded information includes a new section on evaluating sources, a new source list for 24 disciplines, compiled in consultation with 19 college librarians, and a thoroughly revised section on the process of writing a research paper. New! The expanded Writing an Argument section includes a sample student argument paper on telemarketing. Students learn to formulate an argument, support it with evidence, and address opposing views. New! Content changes and additions include integrated ESL coverage throughout, and increased emphasis on style, critical thinking, and writing across the curriculum.

30-Second Brain Anil Seth
2014-03-06 Are we all at the mercy of our brain chemistry? Do you think that the amygdala and the hippocampus are fantastical sea monsters? What can an MRI scan tell us? Could you explain to dinner-party guests why we don't giggle when we tickle ourselves? *30-Second Brain* is here to fill your

mind with the science of exactly what's happening inside your head. Using no more than two pages, 300 words and an illustration, this is the quickest way to understand the wiring and function of the most complex and intricate mechanism in the human body. Discover how the networks of 90 billion nerve cells work together to produce perception, action, cognition and emotion. Explore how your brain defines your personality, and what it gets up to while you are asleep. Illustrated with mind-bending graphics and supported by biographies of pioneers in the field of neuroscience, it's the book to get your grey matter thinking about your grey matter.
