2020-03-02 Today's students need to know how to evaluate sources and use evidence to support their conclusions. This K-12 resource for teachers provides instructional support as well as a variety of learning opportunities for students. Through the activities in this book, students will ask and answer compelling questions, analyze primary sources, approach learning through an inquiry lens, and hone their historical thinking skills. The lessons teach skills and strategies for analyzing historical documents, partnered with document-based assessments. Graphic organizer templates help students structure their analyses. This resource written by Marc Pioch and Jodene Lynn prepares students for standardized tests and engages students with inquiry. The scaffolded approach to teaching analysis skills can be applied across grades K-12.

**APUSH Writing Guide (3rd Ed. )** Stampede Learning Systems 2020-07-14 Writing for the AP U.S. History exam isn't easy, but it's critical to your success: Written responses represent 60% of your APUSH exam score. Stampede Learning is here to help with a book packed with tips, techniques, and exercises to help you CRUSH it on the writing sections of the APUSH exam. With over half of your score on the APUSH exam being based on your written responses, it's a great opportunity to score big for those who are proficient in writing. However, it may seem daunting to understand how to gain proficiency in the technical form of writing expected for the AP exam. Additionally, a tremendous amount of information is covered in a U.S. history course. These facts can add up to big challenges as you work through your AP class and prepare for the exam. This writing guide gives you a breakdown of the types of essay questions that appear on the APUSH exam. We help you learn solid writing techniques to use in your responses to the SAQ, DBQ, and LEQ prompts on the exam. This guide includes: - A description of SAQ, LEQ, and DBQ writing prompts, including similarities and differences, and a rundown of what AP readers are looking for when they read your responses; - Summaries of events, trends, and people that are essential to know for the exam; - Exercises to reinforce your understanding of key dates and events and how they relate to the exam question; - Step-by-step guidance in analyzing DBQ documents systematically, - Practice questions with sample answers to use as a model and compare your answers to after you complete them. FOR INSTRUCTORS: Because our APUSH Writing Guide is in workbook format, each student should obtain her own copy. This book is best used as an instructor-guided resource, but it can easily be used for self-guided test prep by motivated independent learners. Instructors love using this book in the classroom because grading and offering feedback on student writing is a time-consuming process; the faster students become strong writers, the more manageable the teacher's essay-grading workload becomes.

Mapping Skills with Google Earth Big Book Gr. PK-8 Paul Bramley 2011-02-07 Our combined resource teaches the skills of map reading starting with the basics to the more advanced. Combining the curriculum-based lessons for grades prekindergarten to eight, our resource highlights the elements of map reading from symbols and the compass rose to lines of latitude, longitude and time zones. Students will learn the basics of map reading, starting with a general overview of the continents and countries, then becoming more specific with topographic and choropleth maps. Comprised of reading passages, map activities, crossword, word search, comprehension quiz, and test prep, our resource incorporates curriculum-based lessons with Google Earth™ so students can further understand the complexities of map reading with the help of visual and interactive technology. All of our content is aligned to your State Standards and are written to Bloom's Taxonomy.

**Learning Conjunctive SQL Queries by Example** Lin Zhang 2014 The Structured Query Language (SQL) has been the ANSI and ISO industry standard for defining and querying databases for more than three decades now. SQL still dominates the market and influences new evolving paradigms. The increasingly central role of data in business, science and society brings forward a new wave of database users that need to learn SQL to become or remain successful in their domain. Querying databases is a non-trivial exercise: Queries must be specified with respect to a schema which might be difficult to comprehend or not even available, and there is generally no feedback whether the query that users write is actually sound in terms of its semantics. Many new users cannot afford to attend courses to learn how to write sound queries, and even those who can, may still remain in doubt whether they have written a query that meets the target. Trainers of SQL may find it impossible to provide detailed feedback on the soundness of a trainee's query. This is particularly challenging as there are many different ways by which the semantics of a query can be expressed syntactically in SQL. As humans learn a lot from good examples, ideally, users would like to see some example that illustrates the difference of their query from the correct one. Exploiting randomly generated databases or real-world databases for that purpose is doomed: one cannot expect for an SQL query  $Q$  to simply find a database  $db$  which produces different answers than  $Q$  for every SQL query  $Q'$  that is semantically different from  $Q$ . Not surprisingly, previous research on this topic has identified severe limits to this approach. Nevertheless, in terms of learning how to write semantically sound SQL queries it would be great to have an algorithm that could somehow magically produce, for a given query  $Q$ , a database  $db_Q$  that produces answers to  $Q$  that are different from answers to any query  $Q'$  that is semantically different from  $Q$ . It is widely accepted that most queries that database users ask in practice are conjunctive queries. This research has established foundations as well as an implementation and performance analysis of an algorithm that computes such databases  $db_Q$  for conjunctive SQL queries. More precisely, for each conjunctive SQL query  $Q$  the algorithm computes a database  $db_Q$  such that for all queries  $Q' \in L(Q)$ ,  $Q$  and  $Q'$  are semantically equivalent if and only if the evaluation of  $Q$  on  $db_Q$  produces the same answers as the evaluation of  $Q'$  on  $db_Q$ . Here,  $L(Q)$  consists of all those conjunctive SQL queries that have the same SELECT and FROM clause as  $Q$ . A database  $db_Q$  with these properties is called an  $L(Q)$ -test database for  $Q$ . Having  $db_Q$ , reduces the query equivalence problem for the class  $L(Q)$  to the evaluation of such queries on  $db_Q$ . It is therefore not surprising that the existence and computation of test databases are non-trivial. Indeed, it is known that there are conjunctive queries under set semantics for which no test databases exist. It is shown that the investigation of conjunctive queries under bag semantics, i.e. conjunctive SQL queries, is therefore a key enabler for the general existence of test databases. The design of the algorithm for computing a test database for  $Q$  is based on identifying tuples that represent  $Q$  and some queries that properly contain  $Q$  and are minimal with that property. The algorithm is implemented in form of a

Graphical User Interface (GUI) that shows the results of both target query Q and user query Q'€ L(Q), and highlights any existing differences in the results to help users understand either why their query is incorrect or assure them that they produced a correct answer. The GUI therefore provides considerable assistance in learning conjunctive SQL queries. In addition to developing the algorithm that computes dbQ and its implementation in form of the GUI, the research also conducts several experiments that evaluate the performance of the algorithm and analyzes the results. The experiments confirm the intuition that the computation of L(Q)-test databases for conjunctive queries is efficient in practice.
