EBOOK: New Perspectives on Bullying Helen Cowie 2008-10-16 "This book provides a useful round-up of studies that help the reader understand what constitutes bullying (a much-debated point), the characteristics of bullies and children who are targeted, patterns of behaviour and common outcomes for the children involved, as well as what inhibits many schools from formulating effective policy." Children & Young People Now What is bullying? What can we learn from research findings? What are the risk factors for bullying or being bullied? How can we take account of the voice of the child? How can educators, policy-makers, health professionals and parents work together with children and young people to prevent and reduce bullying? This book provides a valuable resource for anyone responsible for the emotional health and well-being of children and young people. The authors focus on the importance of fostering positive relationships in the school community as a whole, so that young people and adults feel empowered to challenge bullying when they encounter it and protect those involved. Using case studies of real experiences, innovative practice, key research findings and perspectives from children and young people themselves, the authors provide perceptive insights into the positive ways of relating to others that are essential if we are to address the issue of bullying successfully. The material outlined in the book is directly linked to the new agenda for change in meeting the needs of the child, empowering children to be consulted and to take responsibility for issues that affect them. It explores a range of effective interventions that can counteract bullying - including restorative approaches; peer mediation; narrative approaches; and cyber support. Key features include: Chapter overviews Examples of effective practice Summaries of key research findings Children's views and experiences Learning points at the end of each chapter List of related organisations, websites and resources to support interventions against bullying Practical guidance based on sound evaluation is provided - as well as an insight into international perspectives on bullying - to help develop a positive school environment and disseminate good practice. New Perspectives on Bullying is an indispensable resource for teachers, researchers, health professionals, social workers and parents.

Olive Propagation Manual Andrea Fabbri 2004-04-01 This practical manual is an authoritative guide to olive propagation, providing extended information on seed germination, rooting of cuttings, grafting and micropropagation. The authors describe each topic in detail and discuss the relative advantages and disadvantages of each procedure. The Olive Propagation Manual has been developed to take into account the future demand for olive oil, which is expected to increase to three million tonnes annually over the next 10 years. Such volumes will require active farming programs and olive trees for new orchards and the replacement of olive trees in existing orchards. As the olive industry moves from traditional manual methods to mechanised operations, planting stock will need to be developed to meet future challenges. Varietal selection will need to be directed to clones that are early bearing, disease resistant, able to be mechanically harvested, and produce quality fruit and oil. Each of these issues are addressed throughout this book. The Olive Propagation Manual explores historical perspectives, traditional methods and state-of-the-art olive propagation including theoretical explanations and all practical aspects.

Critical Medical Anthropology Jennie Gamlin 2020-03-12 Critical Medical Anthropology presents inspiring work from scholars doing and engaging with ethnographic research in or from Latin America, addressing themes that are central to contemporary Critical Medical Anthropology (CMA). This includes issues of inequality, embodiment of history, indigeneity, non-communicable diseases, gendered violence, migration, substance abuse, reproductive politics and judicialisation, as these relate to health. The collection of ethnographically informed research, including original theoretical contributions, reconsiders the broader relevance of CMA perspectives for addressing current global healthcare challenges from and of Latin America. It includes work spanning four countries in Latin America (Mexico, Brazil, Guatemala and Peru) as well as the trans-migratory contexts they connect and are defined by. By drawing on diverse social practices, it addresses challenges of central relevance to medical anthropology and global health, including reproduction and maternal health, sex work, rare and chronic diseases, the pharmaceutical industry and questions of agency, political economy, identity, ethnicity, and human rights.

Intensive Transactional Analysis Psychotherapy Marco Sambin 2018-06-13 Intensive Transactional Analysis Psychotherapy: An Integrated Model (ITAP) introduces a new approach of psychotherapy. Based on psychodynamic foundations, the ITAP integrates the most recent trends in short-term dynamic psychotherapy and Transactional Analysis. This book develops an innovative, clear and complete clinical model of ITAP, and introduces the reader, step-by-step, to the theoretical basis underlying the technique of this intervention. The authors introduce the therapeutic procedure by bringing together the theory with brief clinical examples, thereby demonstrating the attitude of the intense therapist as well as which theoretical pathways to take to progress with the patient. In addition to the modulation of the technique based on the level of the patient's suffering, there is also a systematic examination of which cases should be treated with ITAP, and in what way. Intensive Transactional Analysis Psychotherapy is a therapy which can be easily used by all therapists, and this book will be of great interest to Transactional Analysis therapists and other therapists interested in Transactional Analysis and short-term dynamic psychotherapy.

Hypnosis and Treating Depression: Applications in Clinical Practice Michael D. Yapko 2013-08-21 Michael Yapko's seminal 1992 book, *Hypnosis and the Treatment of Depressions*, was the first book ever written on the subject of applying hypnosis in the treatment of depressed individuals. Since its publication, Yapko's work has not only withstood the test of colleagues previously dismissive of the merits of hypnosis as a tool of treatment, but has thrived in the face of it. *Hypnosis and Treating Depression* diversifies the range of topics to consider and increases the number of knowledgeable contributors on the subject of treating depression with hypnosis. The book features chapter contributions by highly experienced and well-known experts on using hypnosis to treat specific forms of depression, with assessment and intervention strategies as well as sample transcripts of the use of hypnosis in therapy sessions. It discusses both broad and targeted applications of hypnosis in treatment, the treatment of depression with hypnosis in special populations, as well as special considerations regarding hypnotic treatment. As a practical guidebook for clinicians looking to add to their treatment protocols, *Hypnosis and Treating Depression: Applications in Clinical Practice* provides an updated and comprehensive volume on therapeutic uses of hypnosis in the treatment of depression.

Six Sonatinas Carl Philipp Emanuel Bach 2022-03-26 Under the tutelage of his famous father Johann Sebastian Bach, Carl Philipp Emanuel Bach studied harpsichord and clavichord during his early years and eventually adopted the piano as his primary instrument. A prolific composer, producing over 200 works, C.P.E. Bach wrote symphonies, sonatas and other instrumental works in the Rococo and early Classical style of the 18th century. This style of writing is marked by lyric phrases and light ornamentation that put aside the polyphony and thorough bass of the late baroque composers. The ideas for interpreting and ornamenting the sonatinas in this collection are taken from "Essay on the True Art of Playing Keyboard Instruments" by C.P.E. Bach. They transpose quite well for solo guitar and are a refreshing alternative to compositions by guitarists of the classical era like Sor and Giuliani.

Looking Inside Jets Simone Marzani 2019-05-11 This concise primer reviews the latest developments in the field of jets. Jets are collinear sprays of hadrons produced in very high-energy collisions, e.g. at the LHC or at a future hadron collider. They are essential to and ubiquitous in experimental analyses, making their study crucial. At present LHC energies and beyond, massive particles around the electroweak scale are frequently produced with transverse momenta that are much larger than their mass, i.e., boosted. The decay products of such boosted massive objects tend to occupy only a relatively small and confined area of the detector and are observed as a single jet. Jets hence arise from many different sources and it is important to be able to distinguish the rare events with boosted resonances from the large backgrounds originating from Quantum Chromodynamics (QCD). This requires familiarity with the internal properties of jets, such as their different radiation patterns, a field broadly known as jet substructure. This set of notes begins by providing a phenomenological motivation, explaining why the study of jets and their substructure is of particular importance for the current and future program of the LHC, followed by a brief but insightful introduction to QCD and to hadron-collider phenomenology. The next section introduces jets as complex objects constructed from a sequential recombination algorithm. In this context some experimental aspects are also reviewed. Since jet substructure calculations are multi-scale problems that call for all-order treatments (resummations), the bases of such calculations are discussed for simple jet quantities. With these QCD and jet physics ingredients in hand, readers can then dig into jet substructure itself. Accordingly, these notes first highlight the main concepts behind substructure techniques and introduce a list of the main jet substructure tools that have been used over the past decade. Analytic calculations are then provided for several families of tools, the goal being to identify their key characteristics. In closing, the book provides an overview of LHC searches and measurements where jet substructure

techniques are used, reviews the main take-home messages, and outlines future perspectives.

Nematodes and the Biological Control of Insect Pests Robin Bedding 1905 "Insect parasitic and insect killing nematodes provide some of the most promising new alternatives to chemical insecticides. They can be used to control a wide range of insects, are non-polluting, non-toxic and are environmentally friendly in many other ways. They are compatible with other biological and chemical agents and have the distinct advantage over most other forms of insect pest control of being able to seek out pests in cryptic habitats such as tree borers or insects living deep within the soil."--BOOK COVER.
