Laboratory Exercises and Techniques in Cellular Biology Anthony Contento 2012-12-13 The Contento Experimental Cell Biology Lab Book is a modular design that matches the topics discussed in Karp's textbook. The manual itself consists of 30+ experiments that coincide and complement each of the 18 chapters in the Karp text. There are three possible designs of the lab book, based on the instructor's needs. These designs focus on either Techniques, Concepts, or Organelles. The procedures of the 30+ experiments remain standard and unchanged in all designs of the lab book. Special Overview pages, Discussion Questions and Datasheets bookend the procedures in order to create each of the possible textbook designs. This gives instructors flexibility to create a lab book that suits their lecture course curriculum, their experience, and available equipment and supplies.

The Fundamentals of Scientific Research Marcy A. Kelly 2015-09-15

The Fundamentals of Scientific Research: An Introductory Laboratory Manual is a laboratory manual geared towards first semester undergraduates enrolled in general biology courses focusing on cell biology. This laboratory curriculum centers on studying a single organism throughout the entire semester - *Serratia marcescens*, or *S. marcescens*, a bacterium unique in its production of the red pigment prodigiosin. The manual separates the laboratory course into two separate modules. The first module familiarizes students with the organism and lab equipment by performing growth curves, Lowry protein assays, quantifying prodigiosin and ATP production, and by performing complementation studies to understand the biochemical pathway responsible for prodigiosin production. Students learn to use Microsoft Excel to prepare and present data in graphical format, and how to calculate their data into meaningful numbers that can be compared across experiments. The second module requires that the students employ UV mutagenesis to generate hyper-pigmented mutants of *S. marcescens* for further characterization. Students use experimental data and protocols learned in the first module to help them develop their own hypotheses, experimental protocols, and to analyze their own data. Before each lab, students are required to answer questions designed to probe their understanding of required pre-laboratory reading materials.

Questions also guide the students through the development of hypotheses and predictions. Following each laboratory, students then answer a series of post-laboratory questions to guide them through the presentation and analysis of their data, and how to place their data into the context of primary literature. Students are also asked to review their initial hypotheses and predictions to determine if their conclusions are supportive. A formal laboratory report is also to be completed after each module, in a format similar to that of primary scientific literature. The *Fundamentals of Scientific Research: An Introductory Laboratory Manual* is an invaluable resource to undergraduates majoring in the life sciences.
