Trade Therapy World Bank;World Trade Organization 2022-08-29 The COVID-19 (coronavirus) pandemic has exposed the upsides and downsides of international trade in medical goods and services. Open trade can increase access to medical services and goods—and the critical inputs needed to manufacture them—improve quality and variety, and reduce costs. However, excessive concentration of production, restrictive trade policies, supply chain disruptions, and regulatory divergence can jeopardize the ability of public health systems to respond to pandemics and other health crises. *Trade Therapy: Deepening Cooperation to Strengthen Pandemic Defenses*, coordinated by Nadia Rocha and Michele Ruta at the World Bank and Marc Bacchetta and Joscelyn Magdeleine at the World Trade Organization, provides new data on trade in medical goods and services and medical value chains, surveys the evolving policy landscape before and during the pandemic, and proposes an action plan to improve trade policies and deepen international cooperation to deal with future pandemics. As the COVID-19 pandemic lingers, the focus of policy action is on the response, which includes actions aimed at removing bottlenecks and providing government support to promote equitable access to vaccines. As the emergency subsides, the focus should shift to prevention and preparedness. Steps to close information gaps—building on the Multilateral Leaders Task Force on COVID-19, the ACT-Accelerator, and the open markets, for example—by negotiating tariff reductions on medical goods and greater market access in services should take priority. Also important are measures to improve the efficiency of markets, which include harmonizing regulation through mutual recognition or equivalence of standards and creating international standards for essential medical goods, inputs, and production processes. Agreement on a crisis rulebook to be deployed during an emergency—including clear and agreed limits on export policy flexibility and shared rules on intellectual property flexibilities—would provide a more solid policy foundation to address future challenges.

Refugee Mental Health Stephan Zipfel 2019-06-18 The focus of this Research Topic is on research that aims to understand the relationships between pre-migration stressors and potentially traumatic experiences, post-migration living difficulties, and mental health in refugees of both sexes throughout the lifespan. We know very little about how concepts of assessing and treating mental health conditions actually work when applied to traumatized refugee populations from different cultures (e.g., the Yazidis people from northern Iraq). Moreover, there is also a great need to better understand the relationship between mental health and refugees' integration in their host countries' societies (acquiring language skills, fitness for work, economic independence, private life, etc.). This Research Topic will also focus on the issue of culture—the extent to which concepts of mental health care can translate and be implemented in different social, economic, and cultural settings around the world.

Essential tools such as multimeters (DVOM), oscilloscopes, and scan tools are discussed, with special attention given to the automotive multimeter needed to troubleshoot many modern sensors. You'll get step-by-step troubleshooting procedures ranging from safely jump starting a battery to diagnosing parasitic current drain and vehicle energy diagnosis.
