Out of Egypt: Biblical Theology and Biblical Interpretation Zondervan, 2011-03-01 Biblical theology attempts to explore the theological coherence of the canonical witnesses; no serious Christian theology can overlook this issue. The essays in the present volume illustrate the complexity and richness of the conversation that results from attentive consideration of the question. In a time when some voices are calling for a moratorium on biblical theology or pronouncing its concerns obsolete, this collection of meaty essays demonstrates the continuing vitality and necessity of the enterprise. Richard B. Hays, George Washington Ivey Professor of New Testament, The Divinity School, Duke University, USA This volume on biblical theology jumps into the fray and poses the right kind of questions. It does not offer a single way forward. Several of the essays are quite fresh and provocative, breaking new ground (Bray, Reno); others set out the issues with clarity and grace (Bartholomew); others offer programmatic analysis (Webster; Bauckham); others offer a fresh angle of view (Chapman, Martin). The success of this series is in facing the challenge of disarray in biblical studies head-on and then modeling a variety of approaches to stimulate our reflection. Christopher Seitz, Professor of Old Testament and Theological Studies, St. Andrews University, UK

Manual of Psychosocial Rehabilitation Robert King 2012-08-06 Psychosocial Rehabilitation is a comprehensive ready-reference for mental health practitioners and students, providing practical advice on the full range of interventions for psychosocial rehabilitation. It contextualises the interventions described and provides pointers to enable the reader to explore the theory and research. This manual recognises the wide-ranging impact of mental illness and its ramifications on daily life, and promotes a recovery model of psychosocial rehabilitation and aims to empower clinicians to engage their clients in tailored rehabilitation plans. The book is divided into five key sections. Section 1 looks at assessment covering tools available in the public domain, instruments, scoring systems, norms and applications for diagnosis and measurement of symptoms, cognitive functioning, impairment and recovery. Section 2 covers the full range of therapeutic interventions and offers advice on training and supervision requirements and evaluation of process, impact and outcome. Section 3 provides manuals and programs for interventions effectively provided as group

activities. Section 4 explains how to design a full programme that integrates therapeutic interventions with group programmes as well as services provided by other agencies. The final section looks at peer support and self help, providing manuals and resources that support programmes and interventions not requiring professional or practitioner direction.

It demystifies issues of intellectual property rights (IPR) associated with research, design, technology transfer, and commercialization of innovations in technology-led areas such as nanotech. Gives all stakeholders vital information to instill confidence by helping them better understand their individual roles in the IPR process Designed for a diverse readership that may not have background knowledge of the legal nuances of IPR, this book clearly articulates techno-legal aspects of nano-related innovations to aid their effective integration into businesses. This resource stands apart by using numerous case studies and pictorial illustrations, addressing aspects ranging from ideation to commercialization of IP-enabled nanotechnology. It illustrates the evolving patent landscape in nanotechnology, explores the international patent classification system, and details patenting procedures in a range of jurisdictions, including search for nanotechnology prior art and creation of search strategies. The authors discuss patent-led nanotechnology businesses, presenting a wide range of case studies that address construction of valuable patent portfolios, growth of start-ups, and consolidation of IP-led nanobusinesses through mergers, acquisitions, joint ventures, strategic investments, etc. They also cover patent litigations in nanotechnologies and the significance of strategically crafting agreements related to IP

transactions. In addition, they address compliance with contractual obligations, the importance of well-drafted patent specifications, and sensitive aspects of conducting techno-legal due diligence prior to the development and marketing of products. Also covered are vulnerabilities in challenging/defending the validity of patents and negotiating settlements. Integrating use of the IPRinternalise® model for capacity building in human and infrastructural resources, the authors assess the future of IP landscaping in nanotechnology. Here, they focus on patentability, public perception of risks to health and ecosystems, institutionalized management of intellectual property rights, and the steps that will be necessary to meet these and other such challenges on the way to realizing profits in nanotech.

Of Gods and Monsters John T. Soister 2015-09-18 While Universal's Dracula and Frankenstein (both 1931) have received the most coverage of any of the studio's genre releases, it is the lesser known films that have long fascinated fans and historians alike. Starting with *The Last Warning*, a 1929 movie released as both a silent and a talkie, Universal provided a decade of films that entertained audiences and sometimes frustrated critics. Each of Universal's horror, science fiction and "twisted mystery" films receives an in-depth essay for each film. The focus is first on the background to the making of the movie and its place in the Universal catalog. A detailed plot synopsis with critical commentary follows. Filmographic data for the film conclude the entry. Universal's *The Shadow* short film series is covered in an appendix. Many rare illustrations and movie posters are also included.

Mental Health and Anomalous Experience Craig D. Murray 2012 The importance of spiritual and religious frames of reference in making sense of and recovering from mental health difficulties is increasingly being recognized by mental health researchers. This book focuses on a variety of broad existential experiences. These are variously termed 'religious', 'spiritual', 'anomalous', 'extraordinary or exceptional experiences', or 'aberrant perceptions or beliefs' by researchers and health practitioners active in this field. In recognition of the burgeoning work in this area in recent years, this book brings together a broad range of approaches and perspectives to focus on an important set of topics that are important in demarcating this topic area. Permissions, A Survival Guide Susan M. Bielstein 2010-06-15 If a picture is worth a thousand words, then it's a good bet that at least half of those words relate to the picture's copyright status. Art historians, artists, and anyone who wants to use the images of others will find themselves awash in byzantine legal terms, constantly evolving copyright law, varying interpretations by museums and estates, and despair over the complexity of the whole situation. Here, on a white—not a high—horse, Susan Bielstein offers her decades of experience as an editor working with illustrated books. In doing so, she unsnarls the threads of permissions that have ensnared scholars, critics, and artists for years. Organized as a series of “takes” that range from short sidebars to extended discussions, *Permissions, A Survival Guide* explores intellectual property law as it pertains to visual imagery. How can you determine whether an artwork is copyrighted? How do you procure a high-quality reproduction of an image? What does “fair use” really mean? Is it ever legitimate to use the work of an artist without permission? Bielstein discusses the many uncertainties that plague writers who work with images in this highly visual age, and she does so based on her years navigating precisely these issues. As an editor who has hired a photographer to shoot an incredibly obscure work in the Italian mountains (a plan that backfired hilariously), who has tried to reason with artists' estates in languages she doesn't speak, and who has spent her time in the archival trenches, she offers a snappy and humane guide to this difficult terrain. Filled with anecdotes, asides, and real courage, *Permissions, A Survival Guide* is a unique handbook that anyone working in the visual arts will find invaluable, if not indispensable.

Networks on Networks Allen G. Hunt 2016-01-01 Order from chaos is simultaneously a mantra of physics and a reality in biology. Physicist Norman Packard suggested that life developed and thrives at the edge of chaos. Questions remain, however, as to how much practical knowledge of biology can be traced to existing

physical principles, and how much physics has to change in order to address the complexity of biology. Phil Anderson, a physics Nobel laureate, contributed to popularizing a new notion of the end of “reductionism.” In this view, it is necessary to abandon the quest of reducing complex behavior to known physical results, and to identify emergent behaviors and principles. In the present book, however, we have sought physical rules that can underlie the behavior of biota as well as the geochemistry of soil development. We looked for fundamental principles, such as the dominance of water flow paths with the least cumulative resistance, that could maintain their relevance across a wide range of spatial and temporal scales, together with the appropriate description of solute transport associated with such flow paths. Thus, ultimately, we address both nutrient and water transport limitations of processes from chemical weathering to vascular plant growth. The physical principles guiding our effort are established in different, but related concepts and fields of research, so that in fact our book applies reductionist techniques guided by analogy. The fact that fundamental traits extend across biotic and abiotic processes, i.e., the same fluid flow rate is relevant to both, but that distinctions in topology of the connected paths lead to dramatic differences in growth rates, helps unite the study of these nominally different disciplines of geochemistry and geobiology within the same framework. It has been our goal in writing this book to share the excitement of learning, and one of the most exciting portions to us has been the ability to bring some order to the question of the extent to which soils can facilitate plant growth, and what limitations on plant sizes, metabolism, occurrence, and correlations can be formulated thereby. While we bring order to the soil constraints on growth, we also generate some uncertainties in the scaling relationships of plant growth and metabolism. Although we have made an first attempt to incorporate edaphic constraints into allometric scaling, this is but an initial foray into the forest.

Neonatal Neural Rescue A. David Edwards 2013-04-04 Worldwide more than one million babies die annually from perinatal asphyxia and its associated complications such as neonatal encephalopathy – one of the major causes of cerebral palsy and cognitive deficiencies in children aside from prematurity. Cooling the head – or the entire body – minimizes neuronal death, enabling the neonatal brain to be 'rescued' thus greatly improving developmental outcomes. Hypothermic neural rescue therapy has revolutionized the treatment of this condition and is a major recent achievement in neonatal medicine. This landmark book provides a brief scientific underpinning of hypothermic neural rescue therapy and lays out the evidence base for good practice. Internationally recognized authorities give practical advice, drawn from personal experience, on how to deliver hypothermia in the neonatal intensive care unit. A valuable addition to any neonatal unit, this is essential reading for neonatologists, neonatal nurses and paediatric neurologists.

Community Rehabilitation in Neurology Michael P. Barnes 2003-09-04 Rehabilitation should not stop when the disabled person is discharged from hospital, and many neurological patients require ongoing rehabilitation in order to maximize their functional abilities, minimize complications and promote full participation at home and in the community. This book analyses community rehabilitation needs from many different perspectives, including the views of disabled people, rehabilitation clinicians and service providers. Many examples of community rehabilitation schemes are presented, with evidence for their effectiveness, and case studies are used to highlight the main issues. The authors take an international view, and there are chapters dealing with the disabled child in the community and with neuropsychological rehabilitation. This important book examines the growing trend towards community rehabilitation in neurology and is directed towards all clinicians involved with neurorehabilitation.

Molecular and Nano Electronics: Analysis, Design and Simulation Jorge M. Seminario 2006-10-24 The aim of Molecular and Nano Electronics: Analysis, Design and Simulation is to draw together contributions from some of the most active researchers in this new field in order to illustrate a theory guided-approach to the design of molecular and nano-electronics. The field of molecular and nano-electronics has driven solutions for a post microelectronics era, where microelectronics dominate through the use of silicon as the preferred material and photo-lithography as the fabrication technique to build binary devices (transistors). The construction of such devices yields gates that are able to perform Boolean operations and can be combined with computational systems, capable of storing, processing, and transmitting digital signals encoded as electron currents and charges. Since the invention of the integrated circuits, microelectronics has reached increasing performances by decreasing strategically the size of its devices and systems, an approach known as scaling-down, which simultaneously allow the devices to operate at higher speeds. * Provides a theory-guided approach to the design of molecular and nano-electronics * Includes solutions for researchers working in this area * Contributions from some of the most active researchers in the field of nano-electronics

One L Scott Turow 2014 One L, Scott Turow's journal of his first year at law school was a bestseller when it was first published in 1977, and has gone on to become a virtual bible for prospective law students. Not only does it introduce with remarkable clarity the ideas and issues that are the stuff of legal education; it brings alive the anxiety and competitiveness - with others and, even more, with oneself - that set the tone in this crucible of character building. Turow's multidimensional delving into his protagonists' psyches and his marvellous gift for suspense prefigure the achievements of his bestselling first novel, Presumed Innocent. Each September, a new crop of students enter Harvard Law School to begin an intense, often gruelling, sometimes harrowing year of introduction to the law. Turow's group of One Ls are fresh, bright, ambitious, and more than a little daunting. Even more impressive are the faculty: Perini, the dazzling, combative professor of contracts, who presents himself as the students' antagonist in their struggle to master his subject; Zechman, the reserved professor of torts who seems so indecisive the students fear he cannot teach; and Nicky Morris, a young, appealing man who stressed the humanistic aspects of law. Will the One Ls survive? Will they excel? Will they make the Law Review, the outward and visible sign of success in this ultra-conservative microcosm? With remarkable insight into both his fellows and himself, Turow leads us through the ups and downs, the small triumphs and tragedies of the year, in an absorbing and thought-provoking narrative that teaches the reader not only about law school and the law but about the human beings who make them what they are.
