A Crown and a Cross Andrew Goodhead 2010-04-09 This book critically reviews the origins, development, and decline of the Class Meeting. Beginning with an overview of the religious and societal milieu from the sixteenth century, and examining the heritage of John and Charles Wesley, the inheritance John Wesley took from the past is studied. The rise of the Anglican Unitary Societies is considered and Wesley's active work within those societies drawn out. The arrival of the Moravians in London in 1738 to form a group for Germans resident in London influenced many of the Anglican society members, not least the Wesley brothers. These influences are also considered before the Methodist movement, and particularly the Class Meeting are considered in detail. This book is unique in its drawing together the manner of religious association experienced in the Evangelical Revival and aims to show how Methodism was a fusion of pre-existing ideas, formed into a new working model of religious association. Paramount to the success of the early Methodist was the Class Meeting. This book draws on testimony, diary, and journal records to provide first-hand accounts of people's lives being changed through attendance at the Class Meeting and its making possible growth in grace and holiness. In the early period of Methodism the Class Meeting was the crown to Methodist identity. An analysis of the primary aims of this meeting, which gave the Methodist people their distinct characteristics, is followed by a study of the social identity and group processes that occurred when prospective members considered joining the Methodists. The decline of the Class Meeting to 1791 forms the concluding chapters, and, using three classic sociological models-Weber (routinisation), Durkheim (totemism), and Troeltsch (primary/secondary religion)-as themes, the reasons why the class became a cross are examined. Journal, diary, and testimonial material support the Methodists' declining interest in the class that led to its irrelevance for a people seeking respectability rather than an immediate encounter

with God.

The History of the London Water Industry, 1580-1820 Leslie Tomory 2017-04-25 How did pre-industrial London build the biggest water supply industry on earth? Beginning in 1580, a number of competing London companies sold water directly to consumers through a large network of wooden mains in the expanding metropolis. This new water industry flourished throughout the 1600s, eventually expanding to serve tens of thousands of homes. By the late eighteenth century, more than 80 percent of the city's houses had water connections—making London the best-served metropolis in the world while demonstrating that it was legally, commercially, and technologically possible to run an infrastructure network within the largest city on earth. In this richly detailed book, historian Leslie Tomory shows how new technologies imported from the Continent, including waterwheel-driven piston pumps, spurred the rapid growth of London's water industry. The business was further sustained by an explosion in consumer demand, particularly in the city's wealthy West End. Meanwhile, several key local innovations reshaped the industry by enlarging the size of the supply network. By 1800, the success of London's water industry made it a model for other cities in Europe and beyond as they began to build their own water networks. The city's water infrastructure even inspired builders of other large-scale urban projects, including gas and sewage supply networks. The History of the London Water Industry, 1580-1820 explores the technological, cultural, and mercantile factors that created and sustained this remarkable industry. Tomory examines how the joint-stock form became popular with water companies, providing a stable legal structure that allowed for expansion. He also explains how the roots of the London water industry's divergence from the Continent and even from other British cities was rooted both in the size of London as a market and in the late seventeenth-century consumer revolution. This fascinating and unique study of essential utilities in the early modern period will interest business historians and historians of science and technology alike.
