Appropriate Dose Selection - How to Optimize Clinical Drug Development J. Venitz

2014-11-28 Optimal dose individualization has become more important in improving clinical efficacy and safety. This is due in part to the variability in drug response. Therefore, the role of optimal dose finding in early clinical drug development so as to maximize successful clinical use is emphasized. This book reviews innovative methods, tools and examples of rational drug development strategies, particularly for novel oncological agents.

Lighting: Interior and Exterior

Robert Bean 2012-09-10 This guide shows how the concepts used in lighting design arise from the needs of the designer and the user. These concepts are shown in a practical context to enable you to develop and improve your

design skills. Through examples and exercises, this book makes it easier for the student to acquire the level of understanding, knowledge and skill required for both examinations and professional training purposes. Over the past two decades there has been an increasing emphasis on the need for architects and building professionals to have a better understanding of lighting and the ability to deal with lighting matters within the context of the built environment. Lighting is no longer considered to be primarily the province of the electrical engineer. Previously a separate subject in the professional examinations, lighting is often now found in a more general area within an architecture or building course. *Cancer Chemotherapy and Biotherapy* Bruce A. Chabner 2011-12-07 Updated to include the newest drugs and those currently in development, this Fifth Edition is a comprehensive reference on the preclinical and clinical pharmacology of anticancer

agents. Organized by drug class, the book provides the latest information on all drugs and biological agents—their mechanisms of action, interactions with other agents, toxicities, side effects, and mechanisms of resistance. The authors explain the rationale for use of drugs in specific schedules and combinations and offer guidelines for dose adjustment in particular situations. This edition's introduction includes timely information on general strategies for drug usage, the science of drug discovery and development, economic and regulatory aspects of cancer drug development, and principles of pharmacokinetics. Eight new chapters have been added and more than twenty have been significantly revised. A companion website includes the fully searchable text and an image bank.

Transgenic Plants Leandro Peña 2008-02-05 The aim of *Transgenic Plants: Methods and Protocols* is to provide a

source of information to guide the reader through a wide range of frequently used, broadly applicable, and easily reproducible techniques involved in the generation of transgenic plants. Its step-by-step approach covers a series of methods for genetically transforming plant cells and tissues, and for recovering whole transgenic plants from them. The volume then moves on to the use of selectable and reporter markers, positive selection, marker elimination after recovery of transgenic plants, and the analysis of transgene integration, expression, and localization in the plant genome. Although contributors usually refer to model plants in most chapters, the protocols described herein should be widely applicable to many plant species. The last two sections are devoted to methods of risk assessment and to exploring the current and future applications of transgenic technology in agriculture and its social implications in a case study.

Transgenic Plants: Methods

and Protocols is divided into six major sections plus an introduction, comprising 27 chapters. Part I, the Introduction, is a review of the past, present, and perspectives of the transgenic plants, from the discovery of *Agrobacterium tumefaciens* as a feasible transformation vector, to its use as a tool to study gene expression and function, and the current and possible future applications of this technology in agriculture, industry, and medicine.

Pharmacogenetics: Making cancer treatment safer and more effective William G. Newman 2010-07-20

Chemotherapy has made a dramatic difference to improved survival in patients with cancer. However, not all patients respond and some experience serious side effects. "Pharmacogenetics: Making cancer treatment safer and more effective" is an up to date summary of the exciting new field of how genetic testing can tailor more effective prescription in oncology. It is targeted at oncologists and professionals involved in the treatment of patients with cancer. It provides a core background in genetics and pharmacological principles before providing chapters from acknowledged experts in the field on genetic tests in specific cancer types, including breast,

bowel and lung cancer. Clinical cases are used to illustrate the practical application of this knowledge. Chapters on ethics, health economics and the industry aspects of pharmacogenetics set out the challenges and opportunities afforded by this new science.

Aesthetic Surgery of the Facial Skeleton - E-Book

Stephen B Baker 2021-03-10
Achieve optimal results and

high patient satisfaction with Aesthetic Surgery of the Facial Skeleton. Encompassing the entire field of facial skeletal contouring, this one-stop resource uses a problem-based, multidisciplinary approach to skeletal contouring of the face and adjunctive procedures that enhance results. With well-illustrated, focused coverage of all recent advances in this fast-changing area, it's an ideal reference for trainee and practicing cosmetic surgeons, maxillofacial surgeons, craniofacial surgeons, plastic surgeons, otolaryngologists, and oral surgeons. Takes a multidisciplinary, problem-based approach to aesthetic techniques for the face, highlighted by numerous clinical cases and high-quality photos. Covers every area of the field: general principles, orthognathic surgery, alloplastic implants, genioplasty, malar and mandibular recontouring, autologous fat grafting, orbital rejuvenation, forehead and upper face, and many other related topics. Provides expert

guidance on diagnosis, treatment planning, technical aspects, alternative approaches, and treatment of complications. Features state-of-the-art coverage of aesthetic contouring for the transgender patient and the Asian/ethnic patient, and the use of 3D imaging in facial surgery. Includes a section on special case considerations such as facial asymmetry, post-traumatic facial restoration, face transplantation, and nonsurgical enhancement of facial shape.

comprehensive new resource provides an introduction to fundamental Attribute Based Access Control (ABAC) models. This book provides valuable information for developing ABAC to improve information sharing within organizations while taking into consideration the planning, design, implementation, and operation. It explains the history and model of ABAC, related standards, verification and

assurance, applications, as well as deployment challenges. Readers find authoritative insight into specialized topics including formal ABAC history, ABAC's relationship with other access control models, ABAC model validation and analysis, verification and testing, and deployment frameworks such as XACML. Next Generation Access Model (NGAC) is explained, along with attribute considerations in implementation. The book explores ABAC applications in SOA/workflow domains, ABAC architectures, and includes details on feature sets in commercial and open source products. This insightful resource presents a combination of technical and administrative information for models, standards, and products that will benefit researchers as well as implementers of ABAC systems in the field.

Clinical Trials in Oncology, Third Edition Stephanie Green 2012-05-09 The third edition of the bestselling *Clinical Trials in Oncology* provides a concise, nontechnical, and thoroughly up-to-date review of methods and issues related to cancer clinical trials. The authors emphasize the importance of

proper study design, analysis, and data management and identify the pitfalls inherent in these processes. In addition, the book has been restructured to have separate chapters and expanded discussions on general clinical trials issues, and issues specific to Phases I, II, and III. New sections cover innovations in Phase I designs, randomized Phase II designs, and overcoming the challenges of array data. Although this book focuses on cancer trials, the same issues and concepts are important in any clinical setting. As always, the authors use clear, lucid prose and a multitude of real-world examples to convey the principles of successful trials without the need for a strong statistics or mathematics background. Armed with *Clinical Trials in Oncology, Third Edition*, clinicians and statisticians can avoid the many hazards that can jeopardize the success of a trial.

Design Frameworks for Wireless Networks Santosh Kumar Das 2019-08-10 This

book provides an overview of the current state of the art in wireless networks around the globe, focusing on utilizing the latest artificial intelligence and soft computing techniques to provide design frameworks for wireless networks. These techniques play a vital role in developing a more robust algorithm suitable for the dynamic and heterogeneous environment, making the network self-managed, self-operational, and self-configurational, and efficiently reducing uncertainties and imprecise information.

Public Involvement in GEF-financed Projects Global Environment Facility 1996 This document presents the Global Environmental Facility's (GEF) policy on public investment in GEF financed projects. At its meeting in April 1996, the GEF Council approved the principles presented herein as a basis for public involvement in the design, implementation and evaluation of GEF-financed projects. The Council stressed that when applying the principles, there should be

emphasis on local participation and local stakeholders, specific conditions in-country should be taken into consideration, and public involvements should be consistent with the provision of the instrument for the establishment of the restructured GEF. This document builds upon previous papers and incorporates comments from consultations; part 1, provides the rationale and definition of public involvement. The basic principles of public involvement are presented in part 2, together with an identification of how the principles will be applied by the Secretariat, implementing agencies, project executing agencies, and other participating in GEF-financed projects.

Earthquake Disaster Simulation of Civil Infrastructures Xinzheng Lu
 2017-01-18 Based on more than 12 years of systematic investigation on earthquake

disaster simulation of civil infrastructures, this book covers the major research outcomes including a number of novel computational models, high performance computing methods and realistic visualization techniques for tall buildings and urban areas, with particular emphasize on collapse prevention and mitigation in extreme earthquakes, earthquake loss evaluation and seismic resilience. Typical engineering applications to several tallest buildings in the world (e.g., the 632 m tall Shanghai Tower and the 528 m tall Z15 Tower) and selected large cities in China (the Beijing Central Business District, Xi'an City, Taiyuan City and Tangshan City) are also introduced to demonstrate the advantages of the proposed computational models and techniques. The high-fidelity computational model developed in this book has proven to be the only feasible option to date for earthquake-induced collapse simulation of supertall buildings that are higher than 500 m. More

importantly, the proposed collapse simulation technique has already been successfully used in the design of some real-world supertall buildings, with significant savings of tens of thousands of tons of concrete and steel, whilst achieving a better seismic performance and safety. The proposed novel solution for earthquake disaster simulation of urban areas using nonlinear multiple degree-of-freedom (MDOF) model and time-history analysis delivers several unique advantages: (1) true representation of the characteristic features of individual buildings and ground motions; (2) realistic visualization of earthquake scenarios, particularly dynamic shaking of buildings during earthquakes; (3) detailed prediction of seismic response and losses on each story of every building at any time period. The proposed earthquake disaster simulation technique has been successfully implemented in the seismic performance assessments and earthquake

loss predictions of several central cities in China. The outcomes of the simulation as well as the feedback from the end users are encouraging, particularly for the government officials and/or administration department personnel with limited professional knowledge of earthquake engineering. The book offers readers a systematic solution to earthquake disaster simulation of civil infrastructures. The application outcomes demonstrate a promising future of the proposed advanced techniques. The book provides a long-awaited guide for academics and graduate students involving in earthquake engineering research and teaching activities. It can also be used by structural engineers for seismic design of supertall buildings.

Humanitarian Architecture

Esther Charlesworth

2014-06-27 Never has the

demand been so urgent for

architects to respond to the

design and planning challenges

of rebuilding post-disaster sites and cities. In 2011, more people were displaced by natural disasters (42 million) than by wars and armed conflicts. And yet the number of architects equipped to deal with rebuilding the aftermath of these floods, fires, earthquake, typhoons and tsunamis is chronically short. This book documents and analyses the expanding role for architects in designing projects for communities after the event of a natural disaster. The fifteen case studies featured in the body of the book illustrate how architects can use spatial sensibility and integrated problem-solving skills to help alleviate both human and natural disasters. The cases include: Lizzie Babister - Department of International Development, UK. Shigeru Ban - Winner of The Pritzker Architecture Prize 2014, Shigeru Ban Architects and Voluntary Architects' Network, Japan. Eric Cesal - Disaster Reconstruction and Resiliency Studio and Architecture for Humanity, Japan. Hsieh Ying

Chun - Atelier 3, Taiwan. Nathaniel Corum - Education Outreach and Architecture for Humanity, USA. Sandra D'Urzo - Shelter and Settlements and International Federation of the Red Cross and Red Crescent Societies, Switzerland. Brett Moore - World Vision International, Australia. Michael Murphy - MASS Design Group, USA. David Perkes - Gulf Coast Community Design Studio, USA. Paul Pholeros - Healthabitat, Australia. Patama Roonrakwit - Community Architects for Shelter and Environment, Thailand. Graham Saunders - International Federation of Red Cross and Red Crescent Societies, Switzerland. Kirtee Shah - Ahmedabad Study Action Group, India. Maggie Stephenson - UN-HABITAT, Haiti. Anna Wachtmeister - Catholic Organisation for Relief and Redevelopment Aid, the Netherlands. The interviews and supporting essays show built environment professionals collaborating with post-disaster communities as facilitators, collaborators and negotiators

of land, space and shelter, rather than as 'save the world' modernists, as often portrayed in the design media. The goal is social and physical reconstruction, as a collaborative process involving a damaged community and its local culture, environment and economy; not just shelter 'projects' that 'build' houses but leave no economic footprint or longer-term community infrastructure. What defines and unites the architects interviewed for Humanitarian Architecture is their collective belief that through a consultative process of spatial problem solving, the design profession can contribute in a significant way to the complex post-disaster challenge of rebuilding a city and its community.

Waste Materials in

Construction G.R. Woolley

2000-05-12 This volume

presents the proceedings of the International Conference on The Science and Engineering of Recycling for Environmental Protection (WASCON 2000), of which a number of themes have been identified. All are inter-related and inter-dependent in so far as potential users of secondary, recovered or recycled material have to be assured that the material is environmentally safe and stable. It is the environmental challenge that forms a leading theme for the conference, and the themes of quality assurance and quality control support this aspect. In terms of use of 'recovered' materials, science and engineering play

important and inter-dependent roles and this is reflected in themes which form the very core of the conference. Of no less importance is control of land contamination and how we propose to model for the long term impact of our aims. However dutiful and competent our ideas and studies, there has to be a measure of control and the role of legislation forms the final theme of WASCON 2000. The breadth of studies being undertaken world-wide and the innovative ideas that are expressed in papers submitted are worthy of this important subject. It is also interesting to note that papers were offered from 30 countries, a sign of the increasing awareness of the need to preserve our natural resources and utilize to the full those with which we are more familiar. This book will contribute to the understanding of and solution of environmental problems concerning the re-use of waste materials in construction.
