*Community Biodiversity Management* Walter Simon de Boef 2013-03-12 The conservation and sustainable use of biodiversity are issues that have been high on the policy agenda since the first Earth Summit in Rio in 1992. As part of efforts to implement in situ conservation, a methodology referred to as community

biodiversity management (CBM) has been developed by those engaged in this arena. CBM contributes to the empowerment of farming communities to manage their biological resources and make informed decisions on the conservation and use of agrobiodiversity. This book is the first to set out a clear overview of CBM as a methodology for meeting socio-

environmental changes. CBM is shown to be a key strategy that promotes community resilience, and contributes to the conservation of plant genetic resources. The authors present the underlying concepts and theories of CBM as well as its methodology and practices, and introduce case studies primarily from Brazil, Ethiopia, France, India, and Nepal. Contributors include farmers, leaders of farmers' organizations, professionals from conservation and development organizations, students and scientists. The book offers inspiration to all those involved in the conservation and use of agrobiodiversity within livelihood development and presents ideas for the implementation of farmers' rights. The wide collection of experiences illustrates the efforts made by communities throughout the world to cope with change while using diversity and engaging in learning processes. It links these grassroots efforts with debates in policy arenas as a means to respond to the unpredictable changes, such as

climate change, that communities face in sustaining their livelihoods.

Seeds and Sovereignty Jack R. Kloppenburg Jr. 1988-06-06 Seeds for economically important crops are big business indeed. As large seed companies continue to improve their product in various ways, they make use of the original gene pools of these plants, often located in tropical and subtropical areas of the world. With increasing recognition that plant germplasm is an important raw material, highly charged international disputes have developed over the exchange and use of this material, adding another point of contention between poor nations and the manufacturing wealthier ones. Twenty experts from several nations, representing both the natural and social sciences, consider the historical background, the issue of patent rights as applied to plant germplasm, the nature of global genetic interdependence, the internationalization of the seed industry, the implications of biotechnology

on genetic resources, the Third World attitude toward the debate, and the viewpoints of the International Agricultural Research Centers.

**Food Security and Climate Change** Shyam Singh Yadav 2019-02-26 This book looks at the current state of food security and climate change, discusses the issues that are affecting them, and the actions required to ensure there will be enough food for the future. By casting a much wider net than most previously published books—to include select novel approaches, techniques, genes from crop diverse genetic resources or relatives—it shows how agriculture may still be able to triumph over the very real threat of climate change. Food Security and Climate Change integrates various challenges posed by changing climate, increasing population, sustainability in crop productivity, demand for food grains to sustain food security, and the anticipated future need for nutritious quality foods. It looks at individual factors resulting from climate change, including rising

carbon emission levels, increasing temperature, disruptions in rainfall patterns, drought, and their combined impact on planting environments, crop adaptation, production, and management. The role of plant genetic resources, breeding technologies of crops, biotechnologies, and integrated farm management and agronomic good practices are included, and demonstrate the significance of food grain production in achieving food security during climate change. Food Security and Climate Change is an excellent book for researchers, scientists, students, and policy makers involved in agricultural science and technology, as well as those concerned with the effects of climate change on our environment and the food industry.

Quiet Rumours Dark Star Collective 2012-12-11 This is a fascinating window into the development of the women's movement in the words of those who moved it. Compiled and introduced by the UK-based anarchist-

intellectual collective Dark Star, Quiet Rumours features articles and essays from four generations of anarchist-inspired feminists, including Emma Goldman, Voltairine de Cleyre, Jo Freeman, Peggy Kornegger, Cathy Levine, Roxanne Dunbar-Ortiz, Mujeres Creando, Rote Zora, and beyond. All the pieces from the first two editions are included here, as well as new material bringing third and so-called fourth-wave feminism into conversation with twenty-first century politics. An ideal overview for budding feminists and an exciting reconsideration for seasoned radicals.

Plant Genetic Resources and Food Security

Christine Frison 2012-06-25 The International  
Treaty on Plant Genetic Resources for Food and

Agriculture (ITPGRFA) is a pivotal piece of  
recent legislation, providing a route map for the  
use of such resources for sustainable agriculture  
and food security. Plant Genetic Resources and  
Food Security explains clearly the different  
interests and views at stake between all players  
in the global food chain. It touches upon many  
issues such as international food governance and  
policy, economic aspects of food and seed trade,  
conservation and sustainable use of food and  
agricultural biodiversity, hunger alleviation,  
ecological concerns, consumers' protection,  
fairness and equity between nations and  
generations, plant breeding techniques and  
socio-economic benefits related to food local  
economies. The book shows that despite the  
conflicting interests at stake, players managed  
to come to an agreement on food and agriculture  
for the sake of food security and hunger  
alleviation in the world. Published with the Food  
and Agriculture Organization (FAO) of the  
United Nations and with Bioversity

International.

*Farmers' Crop Varieties and Farmers' Rights*

Michael Halewood 2016-03-10 Crop plant varieties developed by local farmers, commonly referred to as ‘farmers’ varieties’, are problematic because there are no fixed taxonomic or legal definitions of them. As a result, policies to increase the share of benefits farmers receive from the use of such varieties struggle to have an effect. Aiming to clarify these issues, this volume explores the nature of farmers’ varieties in the context of their biological, social and legal significance. The book addresses the complexities of defining what farmers’ varieties are and how they differ from one another and from generic varieties. It then charts the evolution of the concept of ‘farmers’ rights’, from the dawn of ‘genetic resources’ as a subject worthy of international

attention, to the first legal recognition of the concept, through to current efforts to develop national level policies and laws. Further, the book examines outstanding policy-making challenges linked to the absence of fixed taxonomic or legal definitions of farmers’ varieties. Case studies are included from Africa, Asia, Europe and South America in which farmers, researchers and policy advocates have been confronted with the issues raised in this book. Various solutions are considered based on revised or new definitions of farmers’ varieties that reflect the biological and cultural realities in which they are produced, and the relative costs and benefits of attempting to implement each of the policies discussed.

**The Fama Portfolio** Eugene F. Fama  
2017-09-07 Few scholars have been as influential in finance, both as an academic field and an industry, as Eugene Fama. Since writing his groundbreaking 1970 essay on efficient capital markets, Fama has written over 100 papers and books that have been cited hundreds of thousands of times. Yet there is no one collection where one can easily find his best

work in all fields. "The Fama Portfolio" will be an outstanding and unprecedented resource in a field that still concentrates mainly on questions stemming from Fama's work: Is the finance industry too large or too small? Why do people continue to pay active managers so much? What accounts for the monstrous amount of trading? Do high-speed traders help or hurt? The ideas, facts, and empirical methods in Fama's work continue to guide these investigations. "The Fama Portfolio" will be a historic and long-lasting collection of some of the finest work ever produced in finance."

**Crop Wild Relatives** Danny Hunter 2012-06-25

Crop wild relatives (CWR) are plant species which are more or less closely related to crops. They are a vital resource by providing a pool of

genetic variation that can be used in breeding new and better adapted varieties of crops that are resistant to stress, disease, drought and other factors. They will be increasingly important in allowing crops to adapt to the impacts of climate, thus safeguarding future agricultural production. Until recently, the main conservation strategy adopted for CWR has been ex situ - through the maintenance of samples as seed or vegetative material in various kinds of genebank or other facilities. Now the need to conserve CWR in their natural surroundings (in situ) is increasingly recognized. Recent research co-ordinated by Bioversity International has produced a wealth of information on good practices and lessons learned for their effective conservation. This book captures the important practical experiences of countries participating in this work and describes them for the wider conservation community. It includes case studies and examples from Armenia, Bolivia, Madagascar, Sri Lanka and Uzbekistan, which

are important centres of diversity for crop wild relatives, and covers four geographical regions - the Caucasus, South America, Africa and the Asia-Pacific Region. It provides practical, relevant information and guidance for the scaling-up of actions targeting CWR conservation around the world.

Diversifying Food and Diets Jessica Fanzo  
2013-06-26 Currently 868 million people are undernourished and 195 million children under five years of age are stunted. At the same time, over 1 billion people are overweight and obese in both the developed and developing world. Diseases previously associated with affluence, such as cancer, diabetes and cardio-vascular disease, are on the rise. Food system-based approaches to addressing these problems that could enhance food availability and diet quality through local production and agricultural biodiversity often fall outside the traditional scope of nutrition, and have been under-researched. As a consequence, there remains

insufficient evidence to support well-defined, scalable agricultural biodiversity interventions that can be linked to improvements in nutrition outcomes. Agricultural biodiversity is important for food and nutritional security, as a safeguard against hunger, a source of nutrients for improved dietary diversity and quality, and strengthening local food systems and environmental sustainability. This book explores the current state of knowledge on the role of agricultural biodiversity in improving diets, nutrition and food security. Using examples and case studies from around the globe, the book explores current strategies for improving nutrition and diets and identifies key research and implementation gaps that need to be addressed to successfully promote the better use of agricultural biodiversity for rural and urban populations and societies in transition.

### **Understanding Knowledge as a Commons**

Charlotte Hess 2011-01-21 Looking at knowledge as a shared resource: experts discuss how to define, protect, and build the knowledge commons in the digital age. Knowledge in digital form offers unprecedented access to information through the Internet but at the same time is subject to ever-greater restrictions through intellectual property legislation, overpatenting, licensing, overpricing, and lack of preservation. Looking at knowledge as a commons—as a shared resource—allows us to understand both its limitless possibilities and what threatens it. In *Understanding Knowledge as a Commons*, experts from a range of disciplines discuss the knowledge commons in the digital era—how to conceptualize it, protect it, and build it. Contributors consider the concept of the commons historically and offer an analytical framework for understanding knowledge as a shared social-ecological system. They look at

ways to guard against enclosure of the knowledge commons, considering, among other topics, the role of research libraries, the advantages of making scholarly material available outside the academy, and the problem of disappearing Web pages. They discuss the role of intellectual property in a new knowledge commons, the open access movement (including possible funding models for scholarly publications), the development of associational commons, the application of a free/open source framework to scientific knowledge, and the effect on scholarly communication of collaborative communities within academia, and offer a case study of EconPort, an open access, open source digital library for students and researchers in microeconomics. The essays clarify critical issues that arise within these new types of commons—and offer guideposts for future theory and practice. Contributors David Bollier, James Boyle, James C. Cox, Shubha Ghosh, Charlotte Hess, Nancy Kranich, Peter

Levine, Wendy Pradt Lougee, Elinor Ostrom, Charles Schweik, Peter Suber, J. Todd Swarthout, Donald Waters

**Cultivating Knowledge** Walter de Boef 1993 Reflects new approaches and concepts in the field of conservation and the development of local crops. Case studies from Africa, Latin America and Asia address these issues from different angles, examining the significance of local knowledge, and documenting new approaches and methodologies.
