Caroline Gordon Veronica A. Makowsky 1989 The author of nine novels, three collections of short stories, and two critical works, Caroline Gordon produced an impressive--though unjustly neglected--body of work. Her considerable contributions to modern Southern fiction notwithstanding, her life was especially fascinating for two other reasons: the prominent

literary circles in which she moved and her heroic efforts to "have it all"--marriage, career, and family--at a time when such aspiration was neither touted nor supported. Sensitive, engaging, and richly detailed, this biography captures Gordon's life in all its multiple layers. As the wife of the poet Allen Tate, Gordon became intimately connected with members of the Fugitive/Agrarian circle, notably Robert Penn Warren and Andrew Lytle. As the Fugitives expanded their vision from Southern to modernistic approaches to literature, Gordon's circle of friends and acquaintances grew to include Ford Madox Ford, T.S. Eliot, Katherine Anne Porter, Scott and Zelda Fitzgerald, Ernest Hemingway, Flannery O'Connor, Walker Percy, Eudora Welty, Robert Lowell, Maxwell Perkins, Hart Crane, William Faulkner, and many others. Even more intriguing, though, is Gordon's story as a Southerner, a woman, and a writer--roles that, for her, were as often mutually exclusive as synergistic. Her life was in some ways similar to that of Zelda Fitzgerald: the Southern belle with the writer-husband and artistic aspirations of her own. Unlike Zelda, Caroline Gordon did not collapse under the strain, although there were prices she paid--particularly in her intense and tangled relationship with Allen Tate, whose work overshadowed her own (or so it seemed to her) and whose philanderings were a continual source of strain and jealousy. In addition to following the windings of Gordon's life--through New York and Tennessee, through England and Paris--Veronica Makowsky looks closely at Gordon's key works--including such novels as *Penhally*, a complex family saga that was her first published book; *Aleck Maury*, *Sportsman*,

the much loved classic for which she is still remembered; *The Malefactors*, a portrait of an aging poet modeled after Tate; and her much admired short stories. In conducting her research, Makowsky interviewed Gordon shortly before her death in 1981 and also received the full cooperation of Gordon's family in gaining access to the novelist's papers. From such rich sources she has produced a compellingly readable portrait of a remarkable woman.

Schools Cannot Do it Alone Jamie Robert Vollmer 2010 *Schools Cannot Do It Alone* tells of Jamie Vollmer, businessman and attorney, as he travels through through the land of public education. His encounters with blueberries, bell curves, and smelly eighth graders lead him to two critical discoveries. First, we have a systems problem, not a people problem. We must change the system to get the graduates we need.

Second, we cannot touch the system without touching the culture of the surrounding town; everything that goes on inside a school is tied to local attitudes, values, traditions, and beliefs. Drawing on his work in hundreds of districts, Jamie offers teachers, administrators, board members, and their allies a practical program to secure the understanding, trust, permission, and support they need to change the system and increase student succes

Frontiers of Human-Centered Computing, Online Communities and Virtual Environments Rae Earnshaw 2012-12-06 Rae Earnshaw and John A. Vince --. . _---- 1 Introduction The US President's Information Technology Advisory Committee (PITAC) recently advised the US Senate of the strategic importance of investing in IT for the 21st century, particularly in the areas of software, human-computer interaction, scalable information infrastructure, high-end computing and socioeconomic issues [1].

Research frontiers of human-computer interaction include the desire that interaction be more centered around human needs and capabilities, and that the human environment be considered in virtual environments and in other contextual information-processing activities. The overall goal is to make users more effective in their information or communication tasks by reducing learning times, speeding performance, lowering error rates, facilitating retention and increasing subjective satisfaction. Improved designs can dramatically increase effectiveness for users, who range from novices to experts and who have diverse cultures with varying educational backgrounds. Their lives could be made more satisfying, their work safer, their learning easier and their health better.

Signals and Systems K. Deerga Rao 2018-04-20 This textbook covers the fundamental theories of signals and systems analysis, while incorporating recent developments from integrated circuits technology into its examples. Starting with basic definitions in signal theory, the text explains the properties of continuous-time and discrete-time systems and their representation by differential equations and state space. From those tools, explanations for the processes of Fourier analysis, the Laplace transform, and the z-Transform provide new ways of experimenting with different kinds of time systems. The text also covers the separate classes of analog filters and their uses in signal processing applications. Intended for undergraduate electrical engineering students, chapter sections include exercise for review and

practice for the systems concepts of each chapter. Along with exercises, the text includes MATLAB-based examples to allow readers to experiment with signals and systems code on their own. An online repository of the MATLAB code from this textbook can be found at github.com/springer-math/signals-and-systems.

Archaeology of Capitalism Matthew Johnson 1996-01-30 An Archaeology of Capitalism offers an account of landscape and material culture from the later Middle Ages to the beginnings of the Industrial Revolution. In tracing some of the roots of modernity back to the transformation of the countryside, this book seeks an innovative understanding of the transition between feudalism and capitalism, and does so through a unique synthesis of archaeology, economic, social and cultural history, historical geography

and architectural history. Medieval and early modern archaeology has in the past focused on small-scale empirical contributions to the study of the period. The approach taken here is both wider-ranging and more ambitious. The author breaks down the dividing lines between archaeological and documentary evidence to provide a vivid reconstruction of pre-industrial material life and of the social and mental processes that came together in the post-medieval period in the transition towards modernity. Matthew Johnson is careful to avoid a simplifying evolutionary explanation, but rather sees the period in terms of a diversity of social and material practices evident in material traces - traces that survive and that, when reused in different contexts, came to mean different things.
