Textbook of Emergency General Surgery

Federico Coccolini 2023-07-08 This text aims to provide a comprehensive review of general emergency surgery, the branch of medicine that treats patients presenting to the hospital with a wide variety of emergency conditions. It includes a section focusing on clinical aspects,

management, logistics, patient cohorts and perioperative considerations in the context of general emergency surgery and trauma. Other sections describe various conditions and diseases in specific anatomical structures to enable readers to easily find the information they need. Written and edited by international experts and opinion leaders in the field, this

book is a valuable reference resource for general and emergency surgeons, trauma surgeons, emergency physicians and nurses. It will also be of interest to residents, students and all other healthcare professionals involved in the management of emergency surgical patients. 2018 Joint Trauma System (JTS) Clinical Practice Guidelines (CPGs) & DOD TRAUMA REGISTRY DATA DICTIONARY For Military and Civilian Health Care Practitioners 2018-10-09 Almost 1,000 total pages; see index at beginning of publications for a complete list of included CPGs. Each CPG includes a section on the following: 1. GOAL 2. BACKGROUND 3. EVALUATION 4. TREATMENT 5. PERFORMANCE IMPROVEMENT (PI) MONITORING 6. SYSTEM REPORTING & FREQUENCY 7. RESPONSIBILITIES & 8. REFERENCES. OVERVIEW Clinical Practice Guidelines (CPGs) are the backbone of the system-wide JTS Performance Improvement program. Health data abstracted from patient

records and after action reports is analyzed and distilled into globally relevant CPGs to remove medical practice variations and prevent needless deaths. The CPGs compiled from DoDTR data and used by healthcare providers worldwide are largely responsible for the decreased Case Fatality Rate for the wars in Iraq and Afghanistan. Examples are better transfusion practices; reduced burn morbidity and mortality; near elimination of extremity compartment syndrome; better patient care documentation; and improved communication across the spectrum of care between geographically dispersed facilities. CPGs are evidence-based and developed with experts in the military and civilian communities, deployed clinicians, Service trauma/surgical consultants, JTS leadership and formerly deployed Trauma Directors and Coordinators. JTS has a formalized process for developing, reviewing, updating, and approving CPGs. The guidelines are developed and implemented by clinical subject matter

experts in response to needs identified in the military area of responsibility. CPGs were developed originally for U.S. Central Command. However, collaborative efforts are ongoing with the other Combatant Commands to customize CPGs to their COCOMs. INTRODUCTION TO THE JOINT TRAUMA SYSTEM (JTS) The Joint Trauma System (JTS) is the Department of Defense (DoD) authority for the military's trauma care system. The vision of the Joint Trauma System is that every Soldier, Sailor, Marine and Airman injured on the battlefield will have the optimum chance for survival and maximum potential for functional recovery. To achieve this vision, in 2006, the JTS implemented programs for data -driven trauma system development and improvement in addition to the collection of trauma data. As part of its data collection efforts, the JTS maintains a registry of trauma patients who received care at medical treatment facilities (MTFs). Since 2007, this registry - known as the DoD Trauma

Registry (DoDTR) - has documented demographic, injury, treatment, and outcomes data for all trauma patients admitted to any DoD MTF, regardless of whether the injury occurred during on-going military operations, and is the largest military trauma data source in the world. Development of the DoDTR began during the early years of the Global War on Terror (GWOt) when the need to systematically improve trauma care for combat wounded resulted in the impromptu creation of a demonstration registry, known then as the Combat Trauma Registry (CTR). The CTR was constructed by the Center for AMEDD Strategic Studies (CASS); trauma-related information was initially abstracted into it from paper medical records received from trauma nurse coordinators (TNCs) at Landstuhl Regional Medical Center (LRMC) in Germany. Shortly after the demonstration program started, the Army Surgeon General approved its transition to an operational mode, leading to the formation of the Joint Theater Trauma System

(JTTS) and, eventually, the Joint Trauma System (JTS).

Acute and Emergency Care in Athletic Training Michelle Cleary 2019-03-05 Athletic trainers are often the first ones on the scene when an individual sustains an acute injury. Therefore, knowing how to assess injuries and illnesses and begin treatment quickly is of vital importance for aspiring athletic trainers. *Acute and Emergency Care in Athletic Training With Web Study Guide* teaches students how to recognize and manage emergency conditions so they can provide appropriate patient care between the field and the emergency department. Authors Michelle Cleary and Katie Walsh Flanagan take an interdisciplinary approach, drawing from literature, position statements, and guidelines from numerous professional health care

organizations to offer current evidence-based clinical best practices. The book's comprehensive coverage adheres to and incorporates guidelines from the Commission on Accreditation of Athletic Training Education (CAATE) and the Board of Certification (BOC), and it is one of the first textbooks to align with the competencies outlined in the CAATE 2020 standards. To prepare students to effectively provide appropriate care before getting an injured or ill athlete to the hospital, *Acute and Emergency Care in Athletic Training* includes the following learning aids:

- Case studies in the web study guide offer practical scenarios that will facilitate critical thinking and decision-making skills.
- Clinical Skills sidebars guide students through the process of completing specific tasks such as splinting, wound care, and airway maintenance.
- Red Flag sidebars indicate areas where significant caution is warranted.
- Decision-making algorithms and decision trees lead students through selecting

the most appropriate treatment option based on a patient's signs and symptoms.

- Key terms are boldfaced in the text and are defined in the glossary section. With a full-color presentation and more than 280 photos and illustrations, the text takes a systematic approach to acute and emergency care, with the content divided into two parts. Part I provides critical information on prevention and risk management strategies, including developing an emergency action plan, conducting an emergency examination, and administering emergency medications. Part II then provides the basics of emergency evaluations, describing how to examine, treat, and manage common acute injuries and illnesses to limit the severity of these potentially life-threatening conditions. To aid instructors using *Acute and Emergency Care in Athletic Training* in the classroom, there is a full array of ancillaries, including a test package, an instructor guide with sample answers to the case study questions, and a presentation package

plus image bank. When an athlete is injured on the field of play, time is of the essence. Acute and Emergency Care in Athletic Training is an invaluable resource for training and preparing the initial responders to recognize critical situations and treat the acutely injured or ill patient.

Maxillofacial Trauma

Akhilesh Kumar Singh
2021-05-02 This book amalgamates the basic concepts in understanding the science of maxillofacial skeleton with the clinical skills

required towards managing complex facial fractures. The book is presented in two sections. The first section introduces the readers with the introduction to maxillofacial trauma, biomechanics of maxillofacial skeleton, the principle of internal fixation, medicolegal aspects of maxillofacial trauma, and preoperative workup which provides a brief outline towards an understanding of the basic concepts about the anatomy and physiology of facial skeleton. The second section is oriented clinically with case-based discussions that start from the emergency management of facial trauma including the recent protocols of basic life support and advanced trauma life support, emergency airway management followed by definitive management guidelines in stabilizing and fixing the fractured facial bones. Principles and Practice of Maternal Critical Care

Sharon Einav 2020-11-25 "This book contains a collection of the most recent insights regarding maternal morbidity and mortality and optimization of the care processes during acute critical illness. The volume represents a practical resource to be used in real-time by medical practitioners faced with a woman who is critically ill during pregnancy and the peripartum period. By providing concise tools for disease identifiers and management flow-charts, the Editors aimed to increase awareness and improve processes of care for this population. Many care paradigms for obstetric patients are currently unstandardized,

unfocused and often do not follow a pre-determined path. Each chapter will provide the practitioner with updated information on how to identify specific critical conditions and how to manage them once they have been identified, to enhance recognition and readiness. This book should be used as a resource to improve the quality of care administered to obstetric patients, to reduce fragmented care processes and to improve interdisciplinary co-ordination and communication, with the overall aim of decreasing maternal morbidity and mortality. Therefore, this book represents an invaluable guide to specialists in critical care, anaesthesia and obstetrics as well as to intensive care nurses and midwives."

Textbook of Emergency Medicine Suresh David 2011-01-01 Textbook of Emergency Medicine (Vol. 1 and 2) is a comprehensive and contemporary exposition of the vast array of disorders and emergencies that might present to the emergency or casualty department of a hospital.

Trauma Operative Procedures G. Berlot 2012-12-06 Trauma has assumed a prominent role in contemporary medicine as an event that can significantly influence clinical variables such as morbidity, functional deficits and consequential disability, and mortality. Trauma is the principal cause of death in the population

below 40 years of age in industrialized countries. Therefore, there is great interest in studying traumatic events from both the clinical and epidemiological viewpoints. The importance of trauma is exemplified by the fact that in many countries the trauma patient is first treated in specialized "trauma centers", in which the diagnostic and treatment processes are facilitated by the 24-hour presence of personnel having interdisciplinary competencies. Trauma in this context consists of any acute, often unexpected, condition. Many of the medical difficulties associated with trauma occur in a relatively brief period that spans from the first call for help to the initiation of first aid measures. A correct approach depends on the availability of experienced personnel. The first measures of aid must guarantee, above all, the patient's survival. The most critical, initial phases of care to trauma patients are represented by the triad: first aid, triage, and transport. Specific morbidity indices, whether

anatomical, functional or mixed, are indispensable elements for monitoring a patient's clinical evolution. The immediate availability of "essential" drugs is imperative to confront the clinical situations that often present in the acute post-traumatic phase.

Textbook of Polytrauma Management Hans-Christoph Pape 2022-05-31 This textbook is a fully updated and revised third edition of a highly successful practical guide to the care of the polytrauma patient. Broadening its readership to students, this new edition comprehensively describes the clinical course of multiple and severe injuries, from the accident scene to rehabilitation. It provides essential practical information on the care of patients both with blunt and penetrating trauma to multiple body regions, and discusses the management of truncal injuries (head, chest, abdomen) as well as fractures of the extremities, pelvis and spine. Further, the book highlights associated injuries that may alter decisions

concerning patients with polytrauma. This new, revised edition takes full account of recent developments, including the increasing economic pressure on health care systems, prehospital treatment, changes in trauma systems and related education, and the improved survival of polytrauma patients. Also covering improved monitoring options along with issues in late patient outcomes and rehabilitation this work will greatly assist students, emergency personnel, trauma surgeons, orthopaedic traumatologists, and anesthesiologists.

Emergency and Trauma Care for Nurses and Paramedics Kate Curtis 2015-10-16 The second edition of *Emergency and Trauma Care for Nurses and Paramedics* provides the most up-to-date and comprehensive coverage of clinical procedures and issues encountered in contemporary emergency care in Australia and New Zealand. Common Problems in Acute Care Surgery Laura J. Moore 2013-03-12 The current medical

literature contains ample text addressing the topics of trauma and critical care. However, there are few texts existing that specifically address the common surgical problems encountered by practicing acute care surgeons. *Common Problems in Acute Care Surgery* provides a comprehensive, evidence-based review of the most common clinical problems encountered by acute care surgeons. Focusing on the clinical care of the patient, this volume explores the general principles of acute care surgery and the specific disease states that are commonly encountered by acute care surgeons. The work also touches upon the ethical issues and systems development behind acute care surgery, including practical considerations for establishing an acute care surgery program, ethical considerations in acute care surgery, and the role of palliative care. Authored by respected experts in the field and illustrated throughout with detailed photographs, *Common Problems in Acute Care Surgery* is of great value to resident

surgeons in training, fellows, and practicing surgeons in acute care surgery.

Hurt Catherine Musemeche, MD 2016-09-06
 Trauma is a disease of epidemic proportions that preys on the young, killing more Americans up to age thirty-seven than all other afflictions combined. Every year an estimated 2.8 million people are hospitalized for injuries and more than 180,000 people die. We take for granted that no matter how or where we are injured, someone will call 911 and trained first responders will show up to insert IVs, stop the bleeding, and swiftly deliver us to a hospital staffed by doctors and nurses with the expertise necessary to save our lives. None of this happened on its own. Told through the eyes of a surgeon who has flown on rescue helicopters, resuscitated patients in trauma centers in Houston and Chicago, and operated on hundreds of trauma victims of all ages, Hurt takes us on a

tour of the advancements in injury treatment from the battlefields of the Civil War to the state-of-the-art trauma centers of today.

The Poly-Traumatized Patient with Fractures Hans-Christoph Pape 2011-06-21 This guide provides practical information for the care of patients with blunt injuries. It covers the care for truncal injuries (head, chest, abdomen) and fracture care of the extremities, the pelvis and the spine in a condensed fashion. Unlike previous, anatomically oriented outlines, this combines the anatomic location with frequent injury combinations. It is written for orthopedic and trauma surgeons, offering them a condensed outline of fracture treatment. In addition, all aspects of trauma care are covered, including associated injuries that may alter the decision making in patients with polytrauma.

Trauma Team Dynamics Lawrence M. Gillman 2015-11-02 This is the first book exploring the unique dynamics created by a multidisciplinary trauma team and how crisis management

strategies can improve teamwork and communication and, potentially, improve patient resuscitation outcomes. Crisis resource management (CRM) is integral to the way that we manage ourselves, team members, and patients during emergency situations. It is essentially the ability to translate knowledge of what needs to be done into effective actions during a crisis situation. Building on the revolutionary American College of Surgeons Advanced Trauma Life Support (ATLS®) course, Trauma Team Dynamics illustrates the integration of the principles of CRM to team dynamics throughout the resuscitation -from the scene, through pre-hospital care and transport, to the trauma bay, and finally to definitive care and beyond. The editors and contributors are international experts in trauma, critical care, emergency medicine, nursing, respiratory therapy, and pre-hospital care and include NASA- and United States military-affiliated experts. Trauma Team Dynamics is intended for

Clinical Anesthesia for the Newborn and the Neonate Usha Saha 2023-01-18 The book covers all aspects of anesthesia in newborns, neonates (under 28 days) and premature babies. These patients are highly vulnerable, very small in size and weight, at very high risk, and have high mortality and morbidity, which gets further aggravated by the medical diseases and congenital abnormalities these babies may suffer from. The book provides knowledge that equips the anesthetists with the regional techniques used to provide both anesthesia and analgesia, including information about the drugs used, skills in providing neuraxial blocks, nerve blocks, etc., complications thereof and the specially designed equipment for these patients (IV cannula, endotracheal tubes, ryles tubes,

laryngoscopes, SpO₂ probes, monitors, incubators, warmers and heaters, mattresses, OT tables). The book covers the pharmacology of drugs used, the effect of anesthetic drugs on the developing brain, pulmonary physiology, airway assessment and management, ventilation modes, getting IV and arterial access, preoperative workup, anesthetic management, and postoperative care. It includes care and concerns from both surgical and anesthesia aspects. It covers all the common surgical diseases along with some rare cases such as oncological concerns, palliative care, ethical concerns and pain management. The book also discusses the role and use of ultrasound. The chapter on anesthesia for short procedures includes common birth and neonatal care injuries. The book contains chapters on fluid therapy, blood and blood product transfusion guidelines and indications, resuscitation of a newborn and neonate, and neonatal rehabilitation to improve neonatal outcomes. It

contains a dedicated chapter on why these babies are at a high risk of morbidity and mortality and contributing maternal factors. All the chapters are written by experts in their fields with vast experience. This book bridges the gap in the knowledge of an anesthesiologist between anesthesia for children and adults and newborns, neonates and preterm babies.

Manual of Definitive Surgical Trauma Care 2E

Kenneth Boffard 2007-08-31 Unless dealing with injury regularly, few surgeons can attain and

sustain the level of skill necessary for decision making in major trauma. This includes both the intellectual decisions and the manual dexterity required to perform all the manoeuvres needed for surgical access and control. These can be particularly challenging, and may be infrequently required, yet rapid access to and control of sites of haemorrhage following trauma can be life-saving surgical intervention. Many situations require specialist trauma expertise, yet often this is simply not on hand within the available time frame. Manual of Definitive Surgical Trauma Care, Second Edition, is written by the editorial board of the DSTCTM, which is a short course focusing on the life-saving surgical techniques and surgical decision-making required for surgeons who deal with major surgical trauma on an infrequent basis. This course supplements the well-recognized and accepted American College of Surgeons' Advanced Trauma Life Support (ATLS®) course. This manual is published in association with

IATSIC (the International Association for the Surgery of Trauma and Surgical Intensive Care), and is written by an Editorial Board of surgeons who belong to that society. IATSIC are broadening their reach and running more and more courses worldwide. This new second edition has been updated to incorporate all recent developments in this rapidly progressing area. It emphasizes how practical 'real-life' decisions on the care of the injured patient should be made and then covers in practical terms the surgical techniques required. Every aspect of surgical trauma care is covered, including: ·the causation of injuries - aids rapid understanding of presented trauma; ·the initial, pre-hospital and emergency department care of the patient - all of which may determine eventual outcome; ·the resources required, both physical and intellectual, within the hospital to deal with the specific problems associated with patients with multiple injuries; the limitations in providing specialist expertise within the time

frame required. It is an ideal practical manual for both trainees and qualified surgeons.

Textbook of Acute Trauma Care Peter Lax
 2022-01-05 This book provides a systemic approach to acute trauma care in line with the ABCDE paradigm and up-to-date information on assessing and managing major trauma from the pre-hospital to the rehabilitation phase. The book's early sections are dedicated to identifying and managing pathology caused by massive haemorrhage, airway, breathing, circulation or neurological trauma and examining the current evidence base relating to their management. The

book then builds from fundamental skills to advanced interventions so that each level of responder can identify and implement aspects of clinical practice that will be of benefit to them at their stage. This approach also explains advanced interventions that may be executed subsequently, explaining how each phase of care sits together. This has a further benefit of producing seamless care for patients by practitioners of different levels using this book as a reference point. Later sections deal with specifics of in-hospital trauma care by speciality, including the explanation of decision making processes by specialities, use of diagnostic and interventional radiology, rehabilitation and psychological aspects of trauma care. The Textbook of Acute Trauma Care also focuses on non-clinical issues relevant to trauma such as training and logistics of retrieval and repatriation, aviation considerations in HEMS, legal and forensic evidence considerations and ethical issues dealing with trauma patients. In

addition, the book contains chapters from international experts on cognitive and human factors relating to healthcare and suggests strategies for training and minimising errors. This book is an essential resource for all grades of practitioner, from first responders to Consultant/Attending Physician level providers.
