New Atlantis Revisited Paul R. Josephson 1997 In 1958 construction began on Akademgorodok, a scientific utopian community modeled after Francis Bacon's vision of a "New Atlantis." The city, carved out of a Siberian forest 2,500 miles east of Moscow, was formed by Soviet scientists with Khrushchev's full support. They believed that their rational science, liberated from ideological and economic constraints, would help their country surpass the West in all fields. In a lively history of this city, a symbol of de-Stalinization, Paul Josephson offers the most complete analysis available of the reasons behind the successes and failures of Soviet science--from advances in nuclear physics to politically induced setbacks in research on recombinant DNA. Josephson presents case studies of high energy physics, genetics, computer science, environmentalism, and social sciences. He reveals that persistent ideological

interference by the Communist Party, financial uncertainties, and pressures to do big science endemic in the USSR contributed to the failure of Akademgorodok to live up to its promise. Still, a kind of openness reigned that presaged the glasnost of Gorbachev's administration decades later. The openness was rooted in the geographical and psychological distance from Moscow and in the informal culture of exchange intended to foster the creative impulse. Akademgorodok is still an important research center, having exposed physics, biology, sociology, economics, and computer science to new investigations, distinct in pace and scope from those performed elsewhere in the Soviet scientific establishment.

The Life and Works of Jāhiz

Jāhiz 1969 Al-Jāhiz, who lived in Basra and Baghdad in the eighth and ninth centuries A.D., was one of the most famous and prolific of Arab prose writers. A versatile polymath and popularizer, known for his works of adab and his religious and political polemics as well as for his literary works of social satire (such as the Book of Misers), al-Jāhiz has been called brilliant and superficial: and certainly his style was characteristically inconsequential and digressive. Professor Pellat says of him elsewhere: 'For the majority of literate Arabs al-Jāhiz remains, if not a complete buffoon, at least something of a jester ... for he never fails, even in the weightiest passages, to slip in anecdotes, witty observations and amusing comments.

Alarmed at the dullness and boredom enshrouding the speculations of a good many of his contemporaries, he deliberately aimed at a lighter touch, and his sense of humor enabled him to deal entertainingly with serious subjects.' In this book Professor Pellat, indisputably the greatest Jāhiz authority, has selected the best as well as the most characteristic of his known writings, prefacing them with an assessment of his life and works.
