Heterologous Expression of Membrane Proteins

Isabelle Mus-Veteau 2022-08-01 This detailed volume explores protocols for the production of membrane proteins in a panel of heterologous organisms for structural studies. Beginning with techniques using *E. coli* as a host for the overproduction and purification of membrane proteins, the book continues with chapters covering mammalian membrane protein production in yeast, insect cells, mammalian cells, as well as using virus like particles and acellular systems. Additionally, new detergents and alternatives to detergents allowing membrane protein purification for structural analyses are described. The book closes with a chapter exploring the use of microscale thermophoresis (MST) to evaluate the binding activity of heterologously expressed

proteins directly in crude membrane extracts. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and up-to-date, *Heterologous Expression of Membrane Proteins: Methods and Protocols*, Third Edition serves as an ideal guide for scientists aiming to produce and purify functional recombinant membrane proteins for structural studies.

Microtubule Dynamics Anne Straube 2017-04-30

Microtubules are at the heart of cellular self-organization, and their dynamic nature allows them to explore the intracellular space and mediate

the transport of cargoes from the nucleus to the outer edges of the cell and back. In **Microtubule Dynamics: Methods and Protocols**, experts in the field provide an up-to-date collection of methods and approaches that are used to investigate microtubule dynamics in vitro and in cells. Beginning with the question of how to analyze microtubule dynamics, the volume continues with detailed descriptions of how to isolate tubulin from different sources and with different posttranslational modifications, methods used to study microtubule dynamics and microtubule interactions in vitro, techniques to investigate the ultrastructure of microtubules and associated proteins, assays to study microtubule nucleation, turnover, and force production in cells, as well as approaches to isolate novel microtubule-associated proteins and their interacting proteins. Written in the highly successful **Methods in Molecular Biology™** series format, chapters include

introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Definitive and practical, **Microtubule Dynamics: Methods and Protocols** provides the key protocols needed by novices and experts on how to perform a broad range of well-established and newly-emerging techniques in this vital field.

Bioenergetics Chong H. Kim 2012-12-06 The emergence of the Biochemical Sciences is underlined by the FAOB symposium in Seoul and highlighted by this Satellite meeting on the "New Bioenergetics." Classical

mitochondrial electron transfer and energy coupling is now complemented by the emerging molecular biology of the respiratory chain which is studied hand in hand with the recognition of mitochondrial disease as a major and emerging study in the basic and clinical medical sciences. Thus, this symposium has achieved an important balance of the fundamental and applied aspects of bioenergetics in the modern setting of molecular biology and mitochondrial disease. At the same time, the symposium takes note not only of the emerging excellence of Biochemical Studies in the Orient and indeed in Korea itself, but also retrospectively enjoys the history of electron transport and energy conservation as represented by the triumvirate of Yagi, King and Slater. Many thanks are due Drs. Kim and Ozawa for their elegant organization of this meeting and its juxtaposition to the FAOB Congress. Britton Chance April 2, 1990 v PREFACE This book contains the contributed

papers presented at the "International Symposium on Bioenergetics: Molecular Biology, Biochemistry and Pathology", held in Seoul, Korea, August 18-21, 1989, sponsored by International Union of Biochemistry (as ruB Symposium No. 191) and Ewha Womans University, Seoul, Korea. The symposium was held in honor of Professor Kunio Yagi to commemorate his 70th birthday.

Enzymes, Receptors, and Carriers of Biological Membranes A. Azzi

2012-12-06 This manual follows at a distance of 3 years the previous one entitled Membrane Proteins, and, like its predecessor, it is the result of an International Advanced Course sponsored by FEBS, SKMB and SNG, which was held in Bern in September

1983. The experiments offered to the students in the course had to be largely up-dated or chosen from new areas of membrane research, because of the substantial and rapid development of the field. Using the protocols of the course, the participants (graduate students, postdoctoral fellows and also senior scientists), in most cases not at all expert in biomembrane research, were able to repeat all the experiments successfully. Those few protocols which for some reason did not fulfill the role we expected were modified. These protocols have now been collected in this manual, which we are able to offer to a number of biology, biochemistry and biophysics laboratories, hoping that the selected number of methods which have been successfully used during the Advanced Course may be useful to them. This manual is also intended for teachers of practical classes, who may use it as a text book and as source of selected references, collected not in the library, but in the laboratory,

from the notebooks of the young researchers who have contributed so much to the success of the Course.
