Nonlinear Process Control: Peter L. Lee 2012-12-06 It is a valuable contribution to the task of filling the theory and practice gap that exists in Process Control. The volume editor has drawn together a number of industrial case studies where Generic Model Control has been successfully applied. Each case study is documented and described in detail. Nonlinear Process Control will be of particular interest to industrial practitioners. It provides a tutorial introduction to Generic Model Control and assists them in applying modern control methods to their processes.

Practical Mathematics for Precision Farming David E. Clay 2020-01-22 As the public and producers becomes more aware of the environmental and economic benefits of precision farming, there has been increased demand for quality training to accurately evaluate spatial variability within fields. Practical Mathematics in Precision Farming provides hand-on training and examples for certified crop consultants (CCAs), farmers, crop consultants, and students (both undergraduate and graduate) on how to conduct to conduct and analyze on-farm studies, write simple programs, use precision techniques to scout for pests and

collect soil samples, develop management zones, determine the cost of production, assess the environmental consequences of precision techniques, understand soil test results, and develop site-specific nutrient and plant population algorithms. Using real agronomic examples, the reader is taught the crucial task of managing products and inputs for application at the right rate, place, and time.

Stone in Architecture Erhard Winkler 2013-03-14 The readers of the first two editions of *Stone: Properties, Durability in Man's Environment*, were mostly architects, restoration architects of buildings and

monuments in natural stone, professionals who sought basic technical information for non-geologists. The increasing awareness of rapidly decaying monuments and their rescue from loss to future generations have urged this writer to update the 1973 and 1975 editions, now unavailable and out of print. Due to the 20-year-long interval, extensive updating was necessary to produce this new book. The present edition concentrates on the natural material stone, as building stone, dimension stone, architectural stone, and decorative field stones. Recently, the use of stone for thin curtain walls on buildings has become fashionable. The thin slabs exposed to a new, unknown complexity of stresses, resulting in bowing of crystalline marble, has attracted much negative publicity. The costs of replacing white slabs of marble on entire buildings with its legal implications have led construction companies into bankruptcy. We blame many environmental problems on acid rain. Does acid rain really accelerate stone decay that much? Stone preservation is being attempted with an ever-increasing number of chemicals applied by as many specialists to save crumbling stone. Chemists filled this need during a time of temporary job scarcity, while the general geologist missed this opportunity; he was too deeply involved in the search for fossil fuels and metals.

An Engineering-economic Comparison of Five Drying Techniques for Shelled Corn on Michigan Farms Juarez de Sousa e Silva 1980 At least 70% of the total corn production in Michigan was estimated to be dried in automatic batch or in-bin batch-type systems. At an initial moisture content of 26% and an after-drying value of 15.5%, approximately 3.6×10^{12} KJ or 14.4×10^8 liters of liquid propane were

required to dry the 1979 Michigan corn crop. Previous research in other U.S. Corn states had shown that in-bin counterflow, in-bin dryeration, natural-air, and low-temperature combination drying procedure high-quality corn and can substantially reduce the drying energy requirement under favorable weather conditions. The objectives of this thesis were to study the feasibility of applying and economically comparing the above techniques with conventional bath drying under Michigan conditions. Five steel bins of 85 m³ capacity were erected at a farm in Bellaire, Michigan. The system was designed to test each technique and adequately handle the farm's corn production. Four storage bins were arranged in a rectangular pattern, so that each could be filled with an auger from a central point, with an automatic cross-flow bath dryer discharging from that position. Two of the storage bins were used to dry corn as a combination system. The first had a centrifugal fan with a 3.7 kw motor delivering 2m³/min/m³ of natural air through a 3.7 m bed. A fan delivering 1.6m³/min/m³ with a 2.2. kw motor and a 10 kw electrical heater were connected to the low-temperature system. The third bin was fitted with a fan delivering 0.8m³/min/m³ for the in-bin dryeration(...).
